

# HLA: Struttura, Funzione e Polimorfismo

OSPEDALE SAN RAFFAELE

**Luca Vago, MD, PhD**

Unit of Immunogenetics, Leukemia Genomics and Immunobiology  
& Hematology and Bone Marrow Transplantation Unit

**Summer School AIBT**  
**Pesaro, 10 Giugno 2016**

# Le molecole HLA

---

- **Molecole HLA Classiche**

- ✓ HLA-A, -B, -C – Classe I
- ✓ HLA-DR, -DQ, -DP – Classe II
- ✓ Alto grado di polimorfismo (>10'000/>3'500 alleli)
- ✓ Ruolo nella presentazione dell'antigene; linfociti T e NK

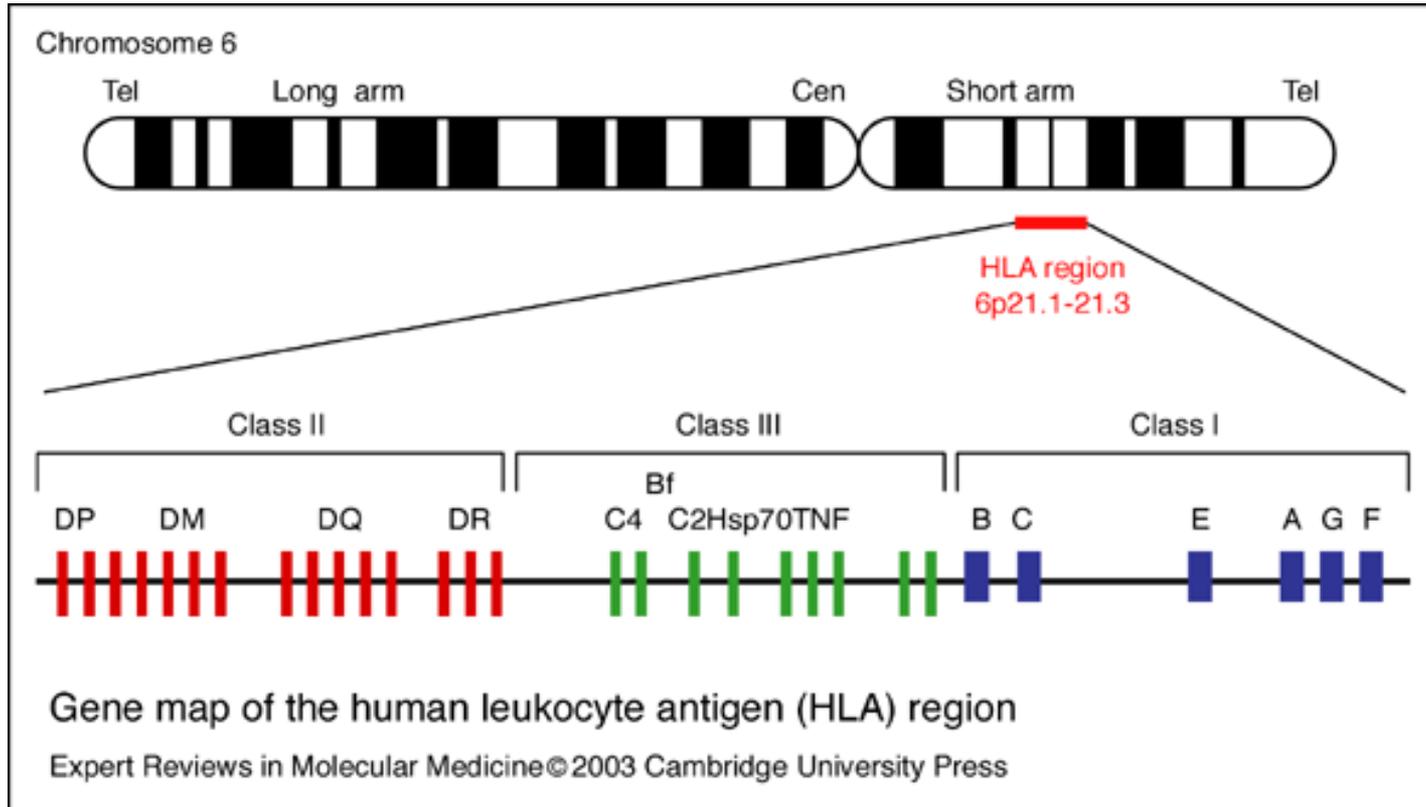

- **Molecole HLA Classe I Non-Classiche**

- ✓ HLA-E,F,G
- ✓ Poco polimorfici (<100 alleli)
- ✓ Ruolo nella tolleranza, immunità NK, altro?

- **Molecole HLA Classe I-simili**

- ✓ MICA, MICB, CD1a, CD1b, CD1d, CD1e
- ✓ Presentazione di antigeni non peptidici (glicolipidi)
- ✓ Interazione anche con cellule immuni “non convenzionali”: NK, iNKT

# Mappa dell' MHC umano

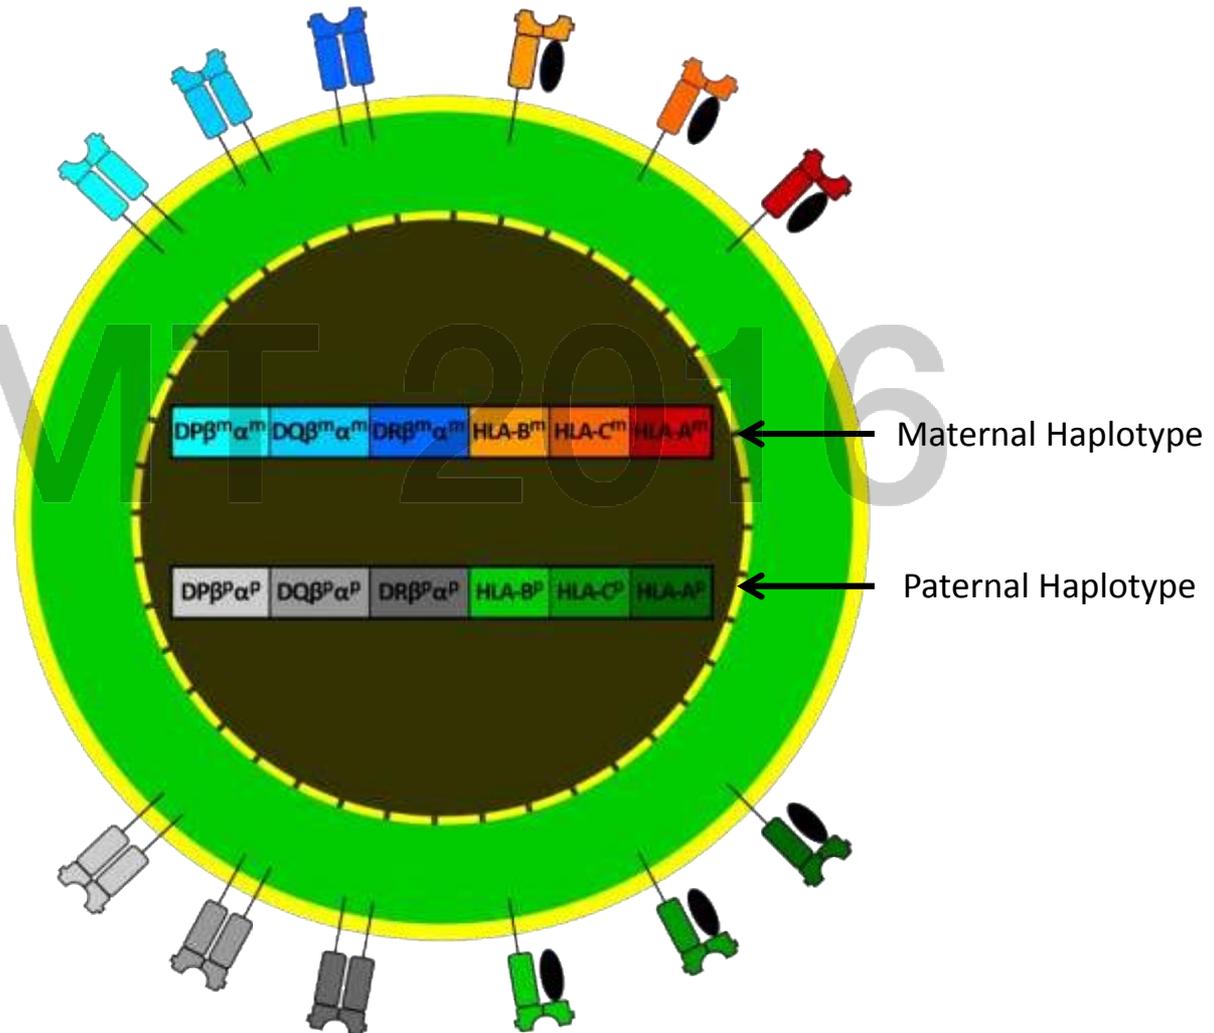

**3,838,986 bp**  
**224 geni (128 espressi)**

# HLA: aplotipi e codominanza

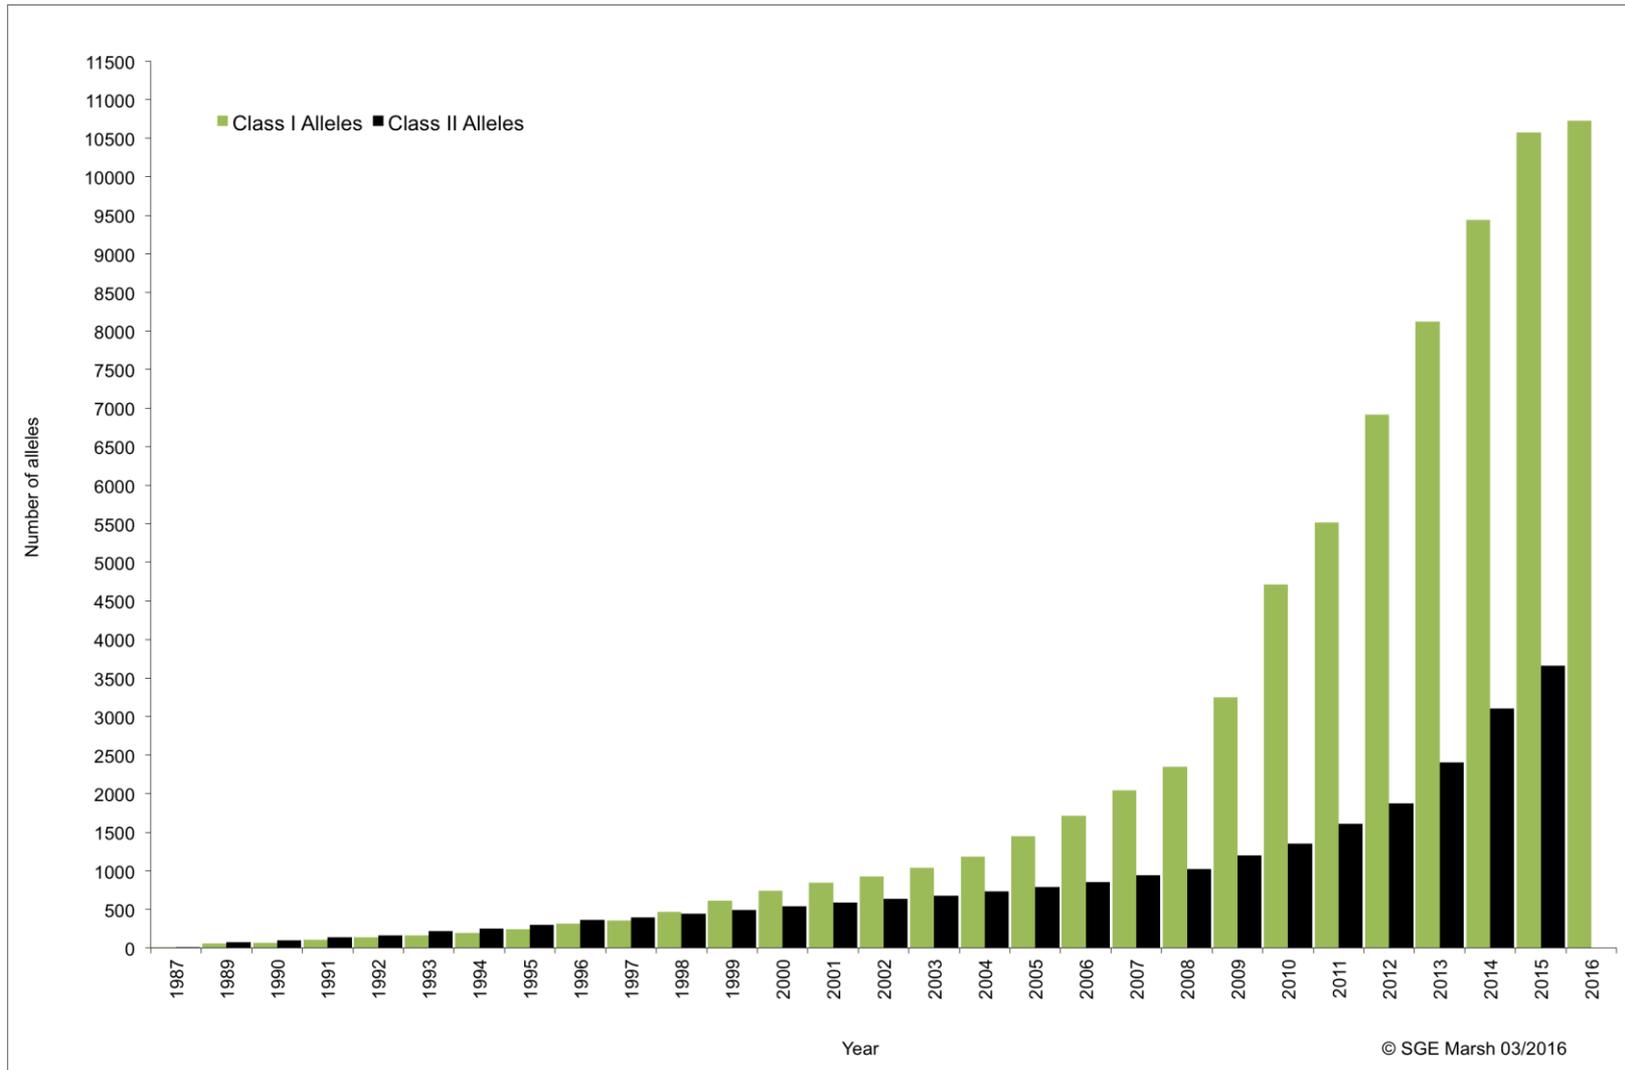

Human Chromosome 6

Siblings:

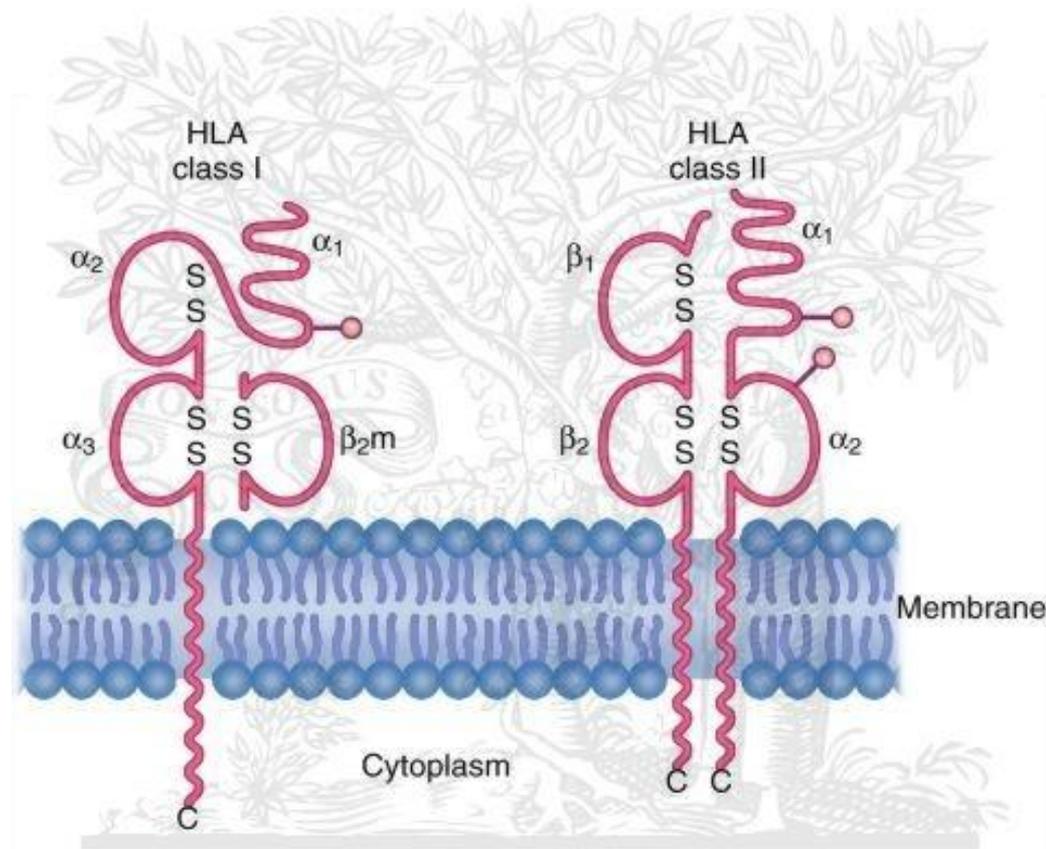

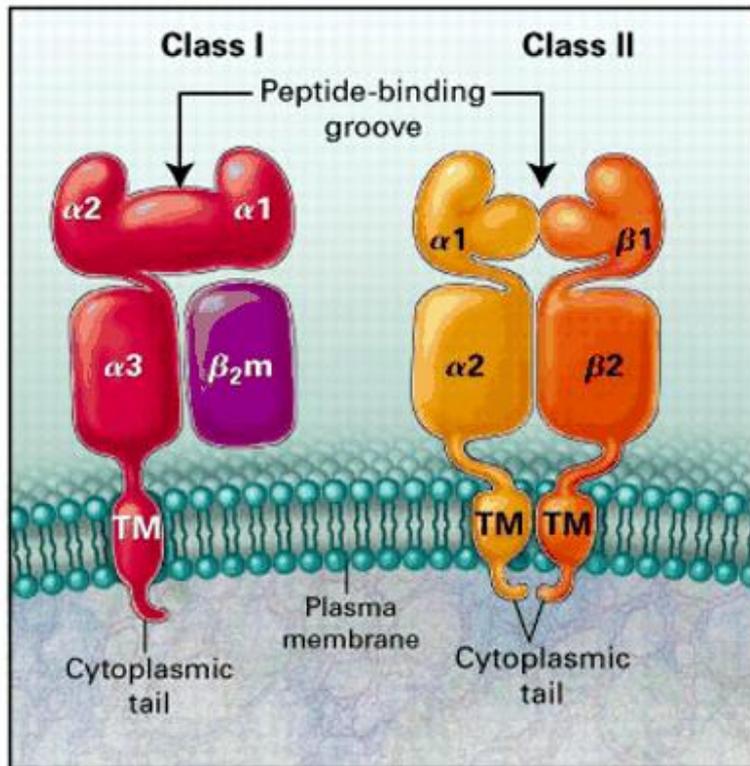

- **HLA-identical (25%)**  
(2/2 haplotypes)
- **HLA-Haploidentical (50%)**  
(1/2 haplotypes)
- **HLA-Diverse (25%)**  
(0/2 haplotypes)

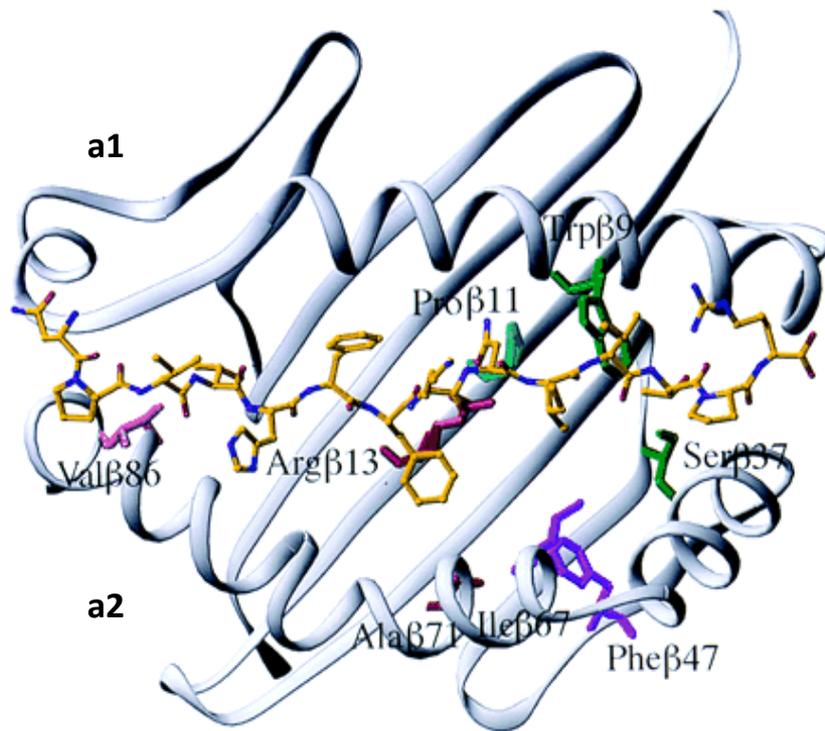

# Polimorfismo HLA

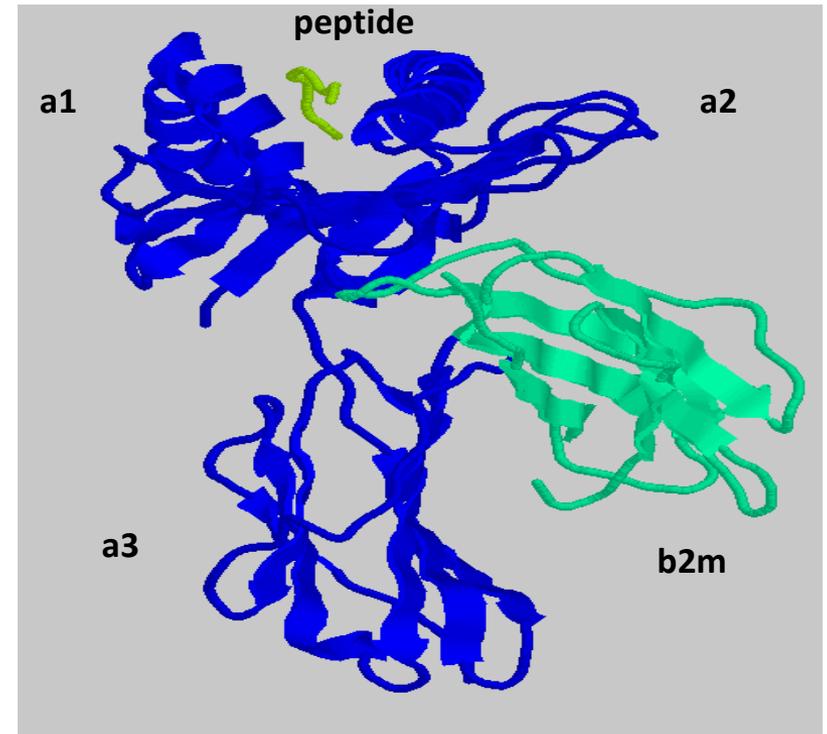

# Struttura delle molecole HLA classiche

# Struttura cristallografica HLA Classe I

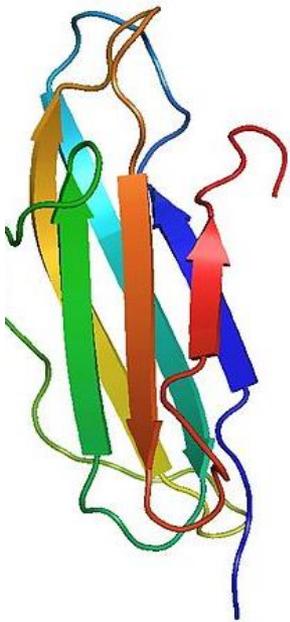

**Superficiale**

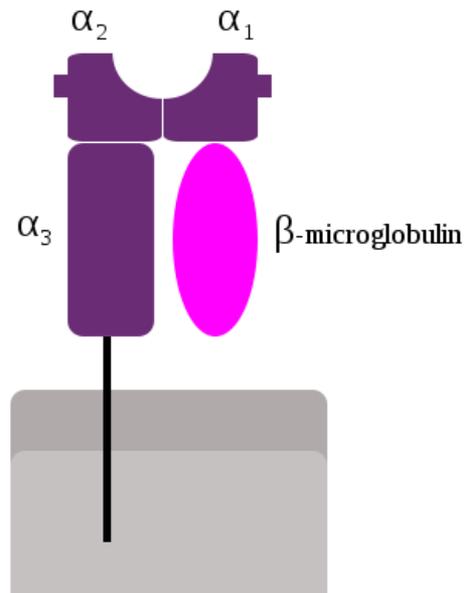

**Laterale**

# $\beta$ 2-microglobulina

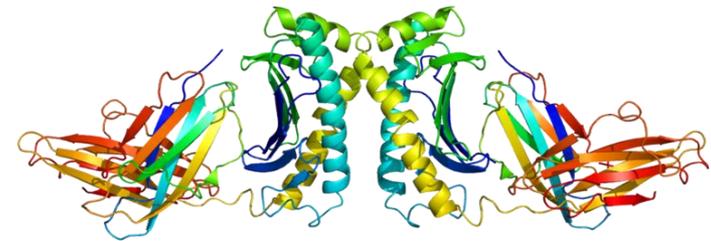

- Human Chromosome 15 – 45-45.01MB
- Limited polymorphism
- Associates with HLA class I (classical and class I-like)
- Associates with Human hemochromatosis protein (HFE)

B2M

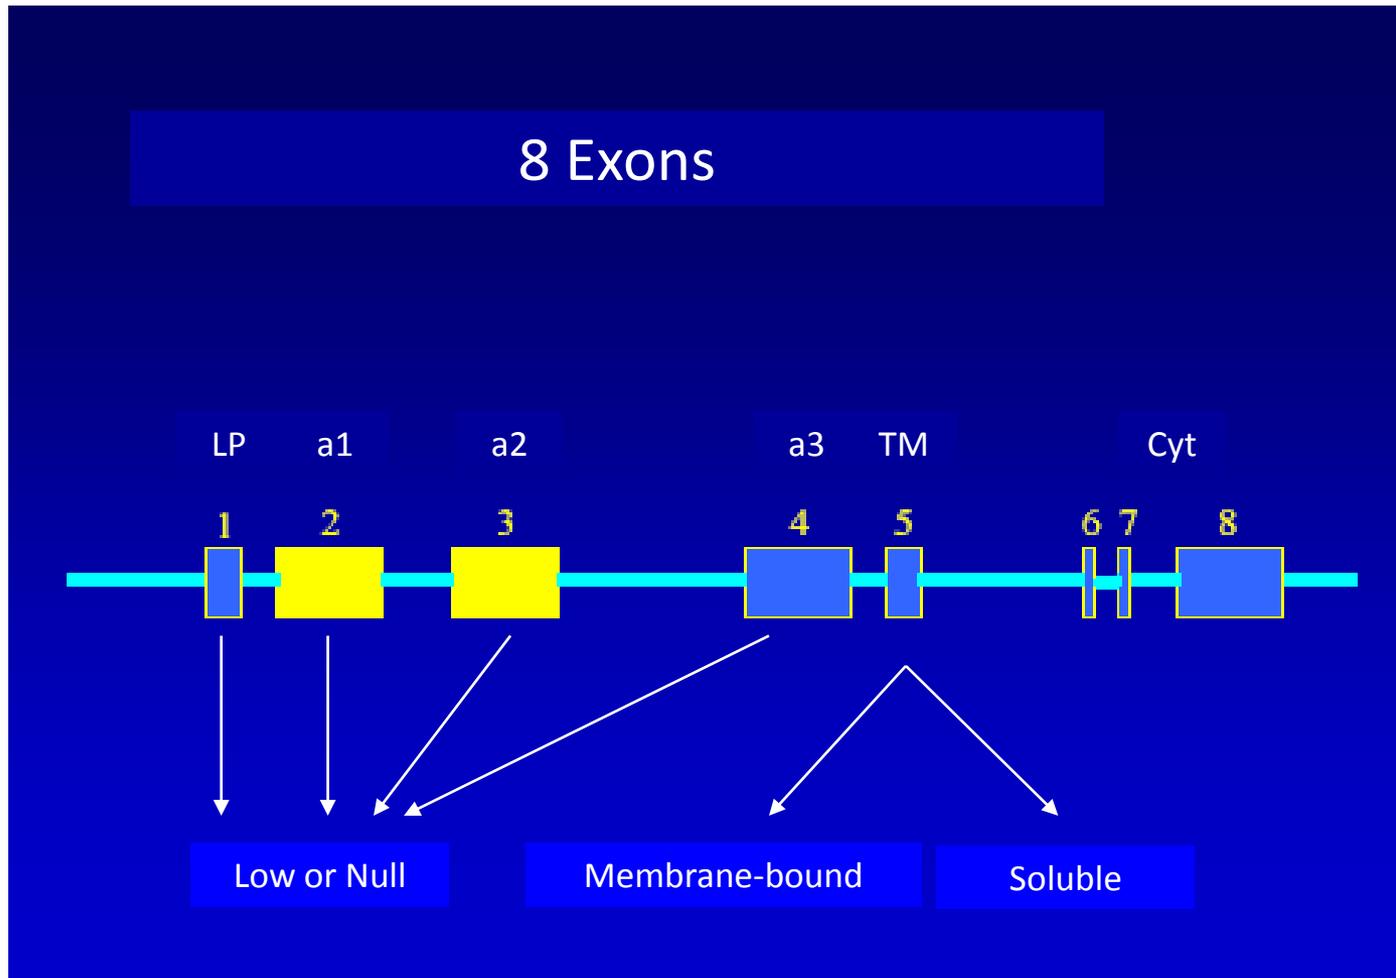

HLA Class I

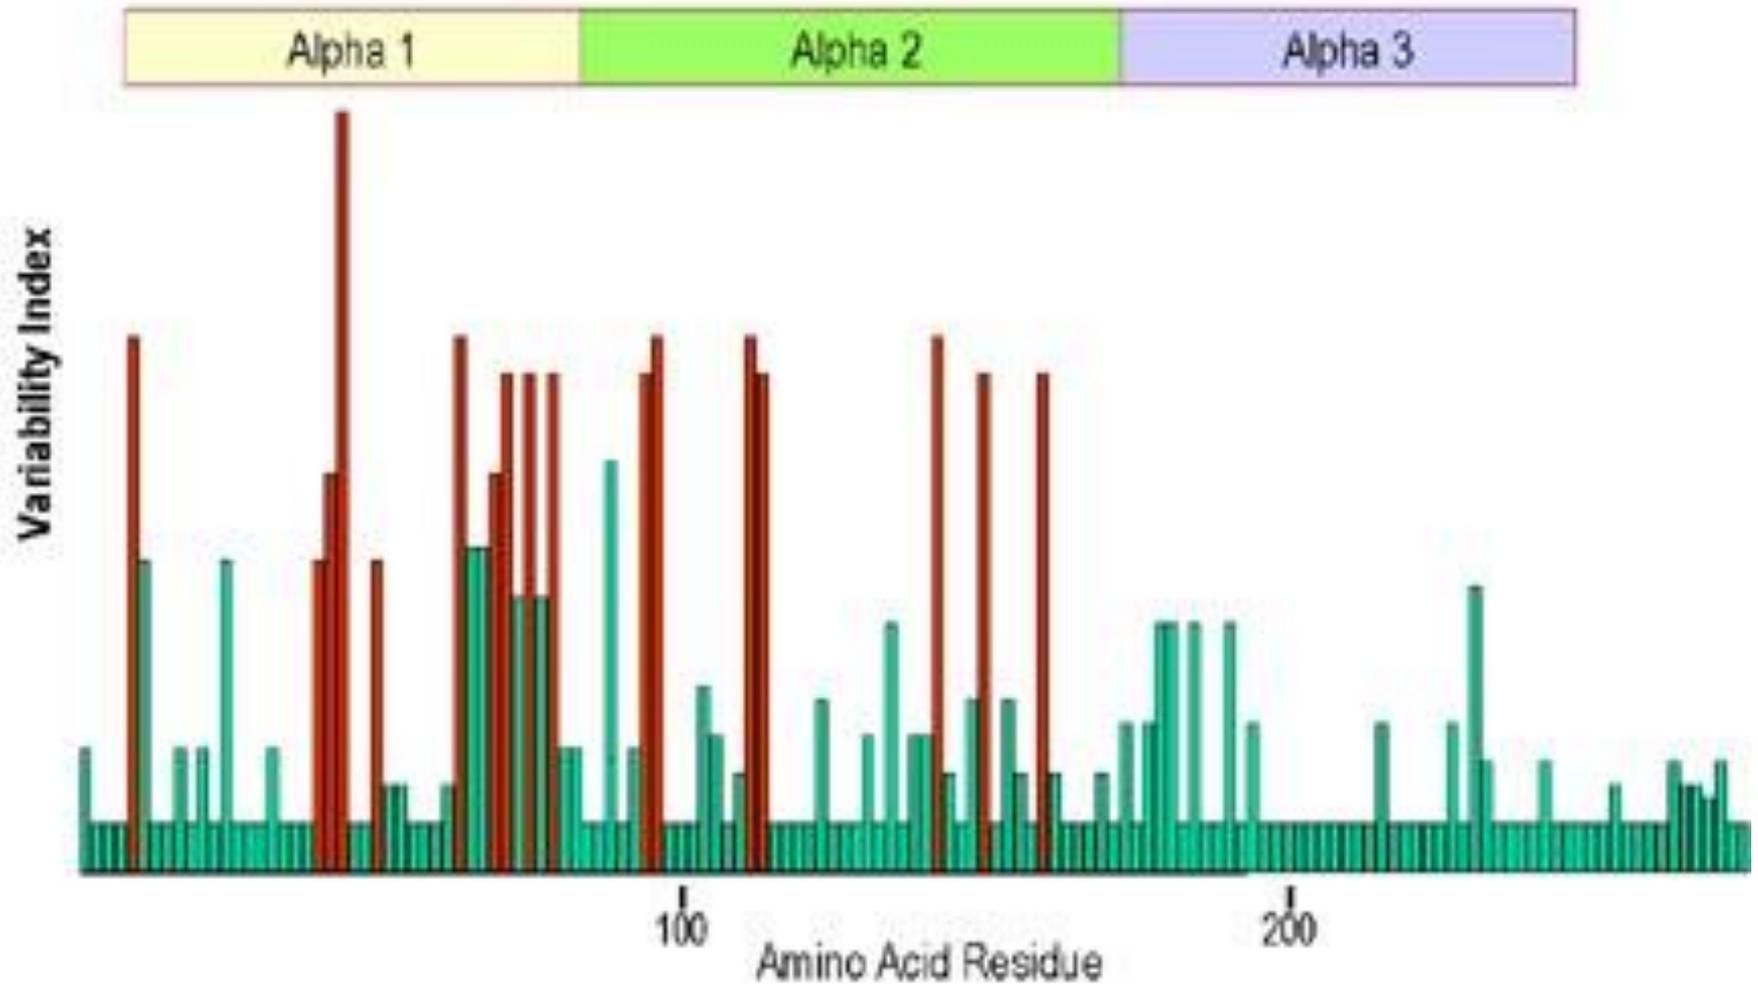

HFE (iron metabolism)

# Gene Organization of HLA Class I

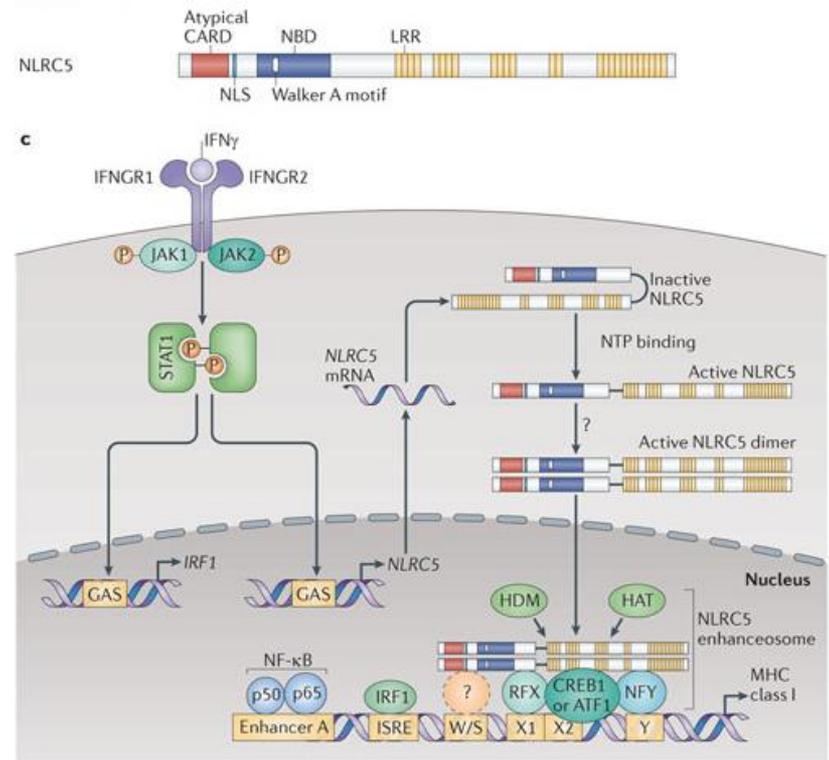

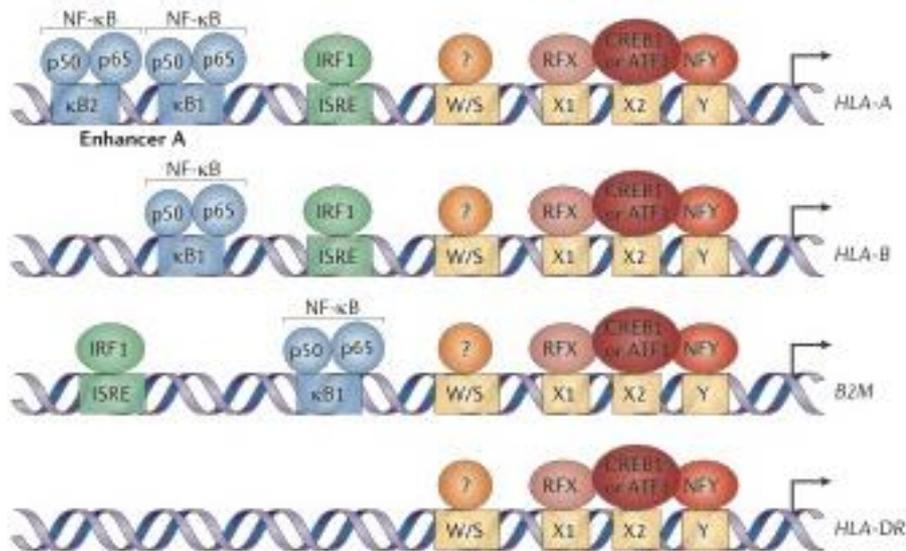

# HLA Class I Polymorphism

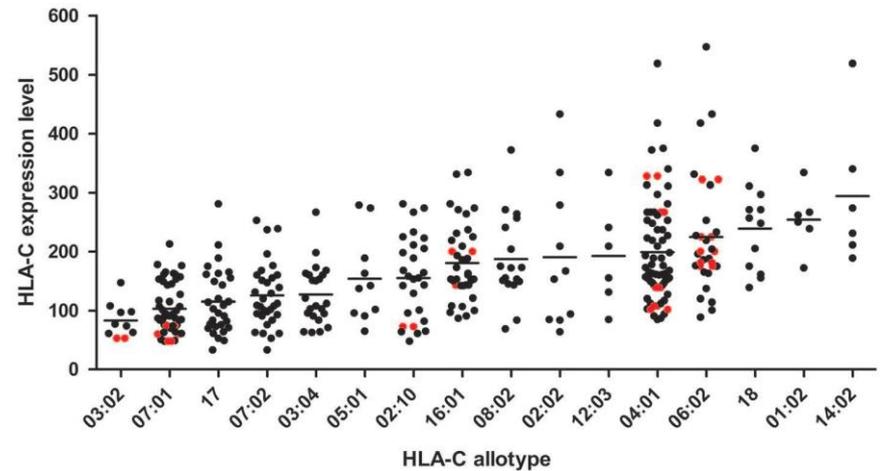

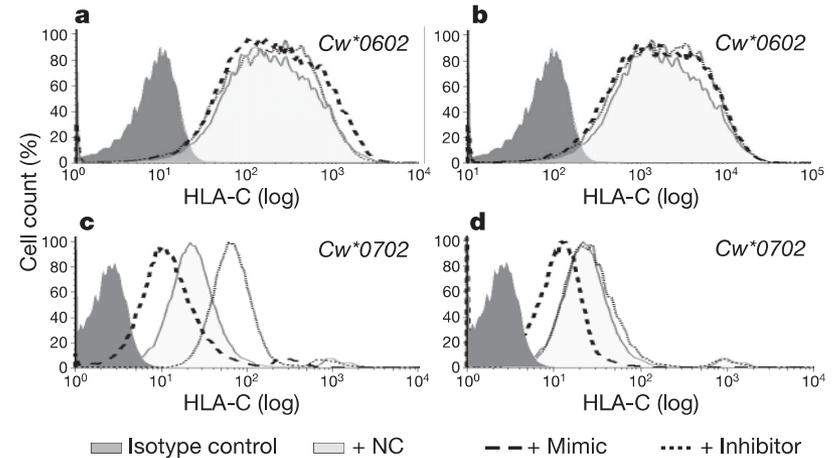

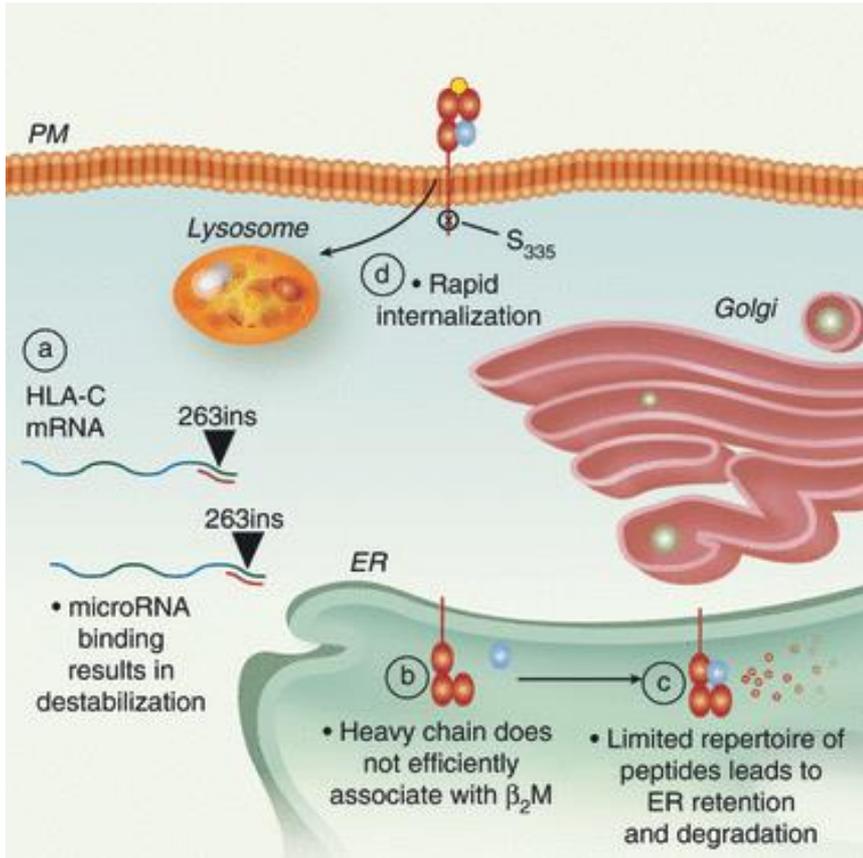

MHC Class I Variability

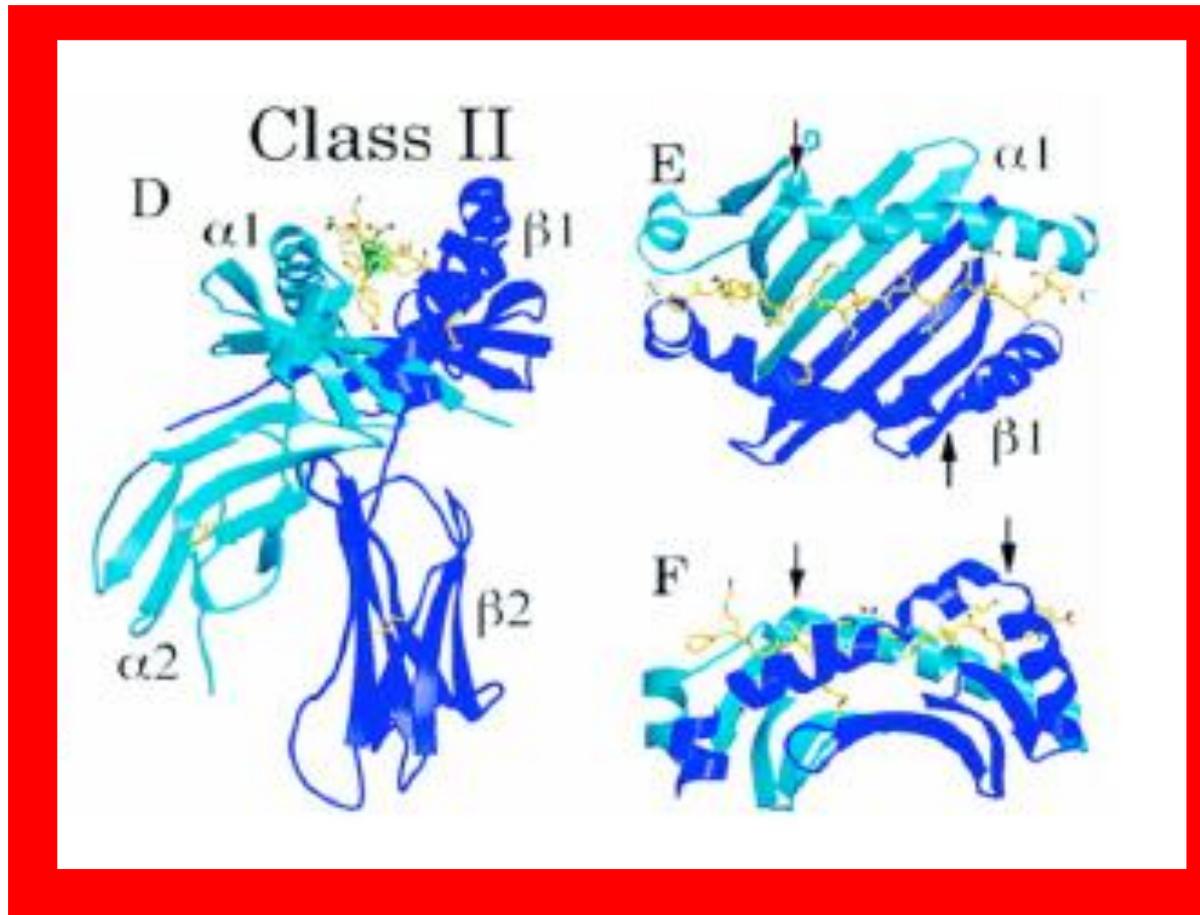

# HLA Class I Transcriptional Regulation

# HLA-C Post-Transcriptional Regulation

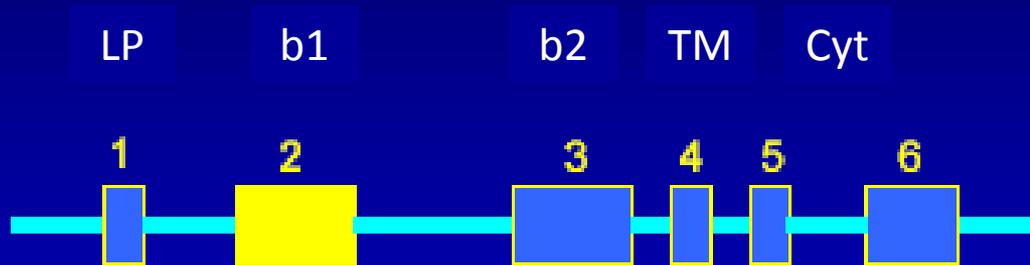

# Struttura cristallografica HLA Classe II

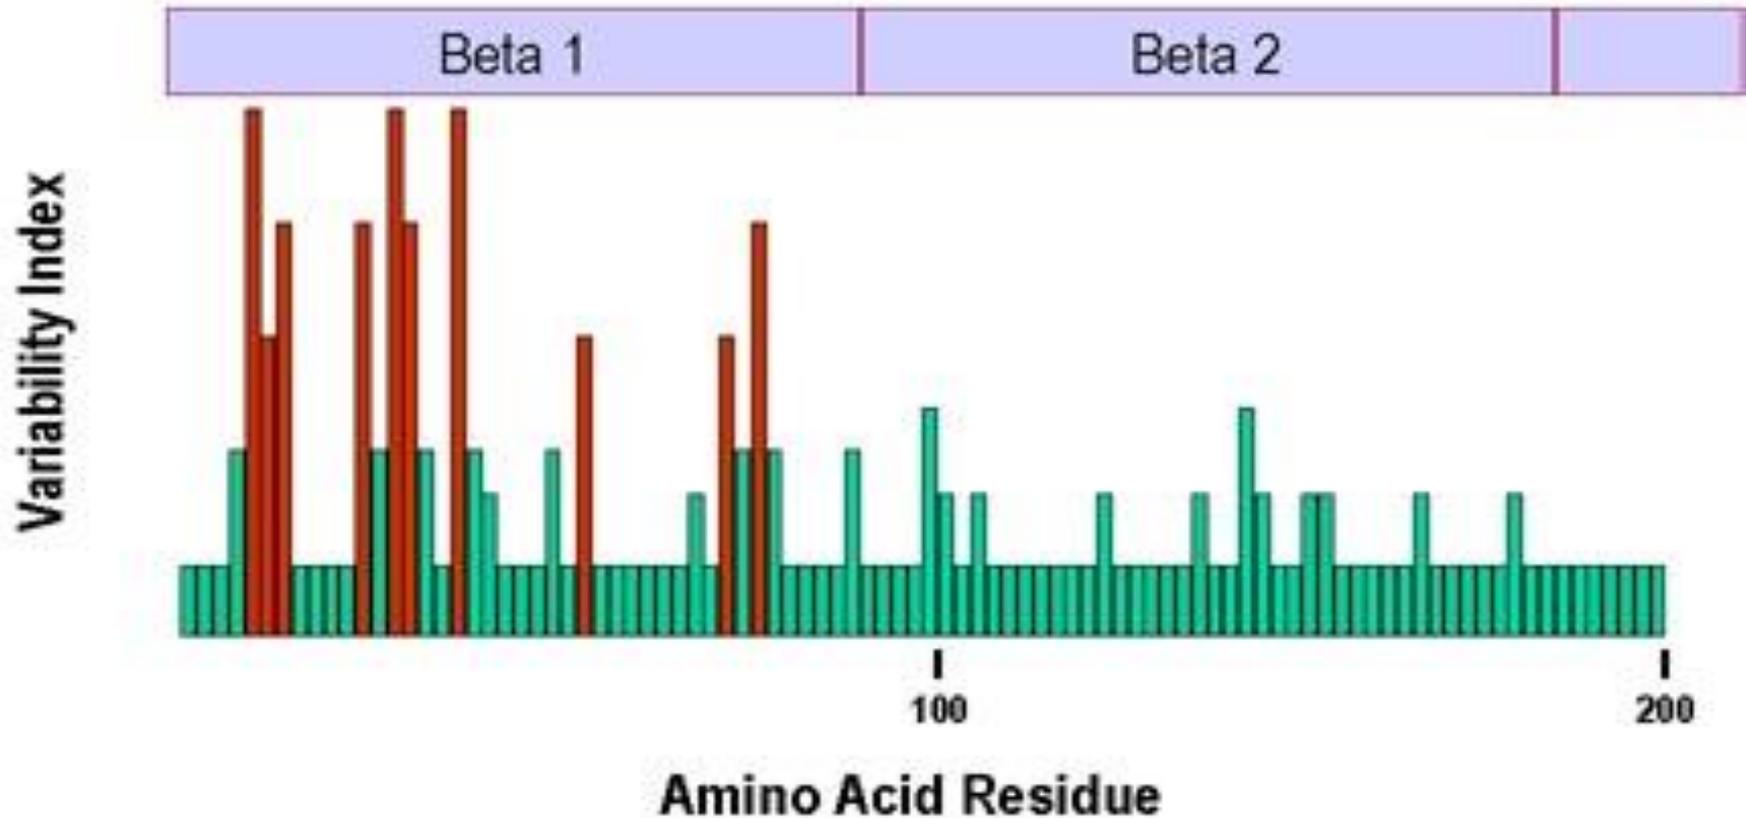

# Gene Organization of HLA Class II

6 Exons

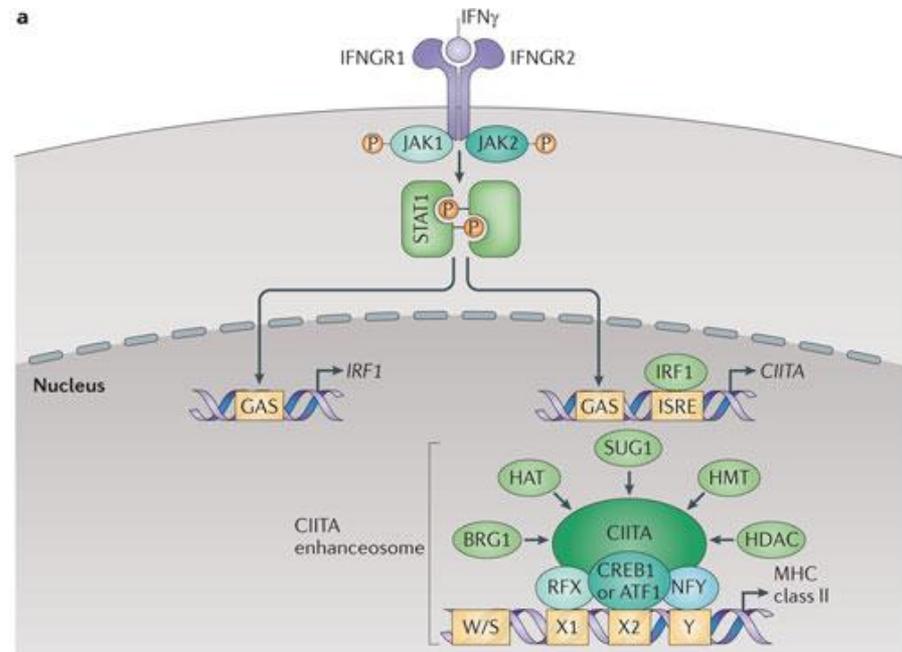

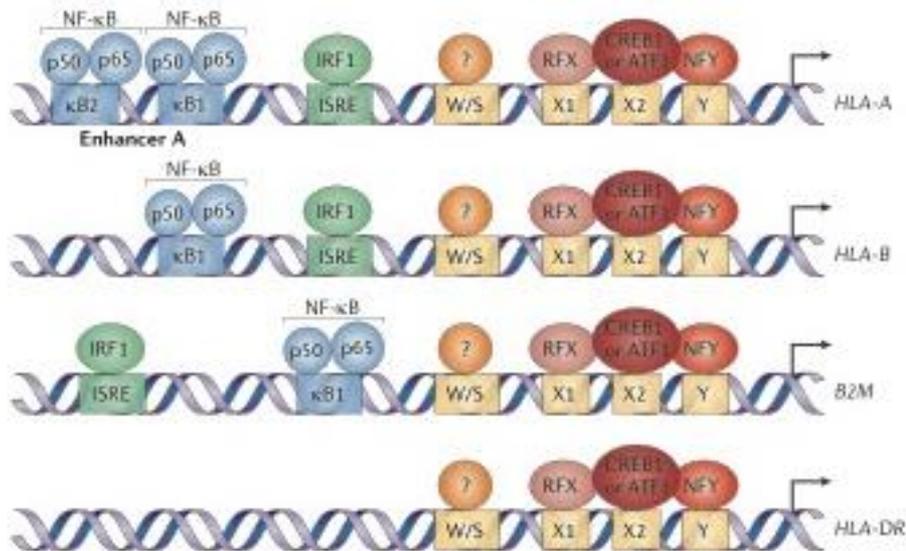

# HLA Class II Polymorphism

## MHC Class II Variability

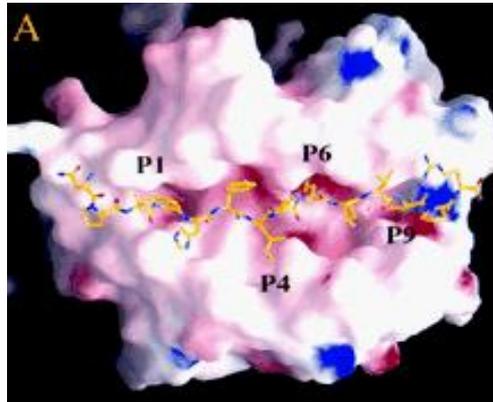

# HLA Class I Transcriptional Regulation

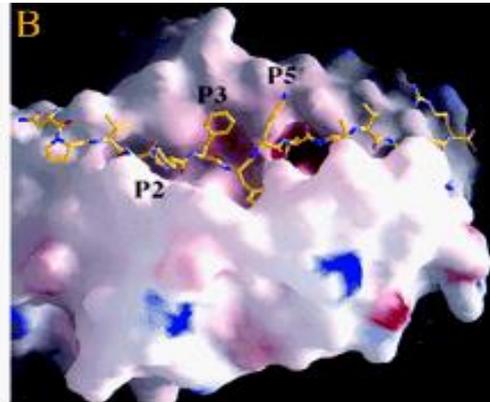

# Struttura cristallografica HLA

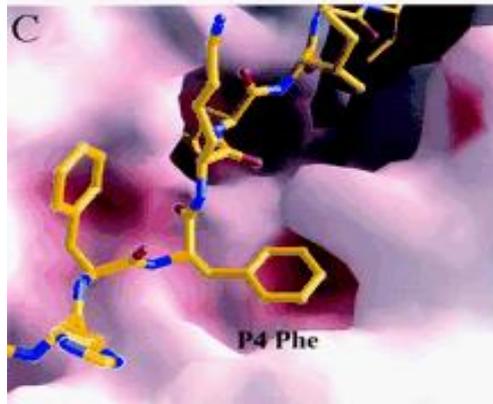

Superficiale

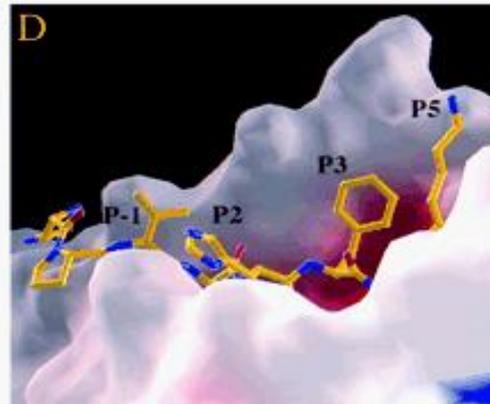

Laterale

Tasca P4

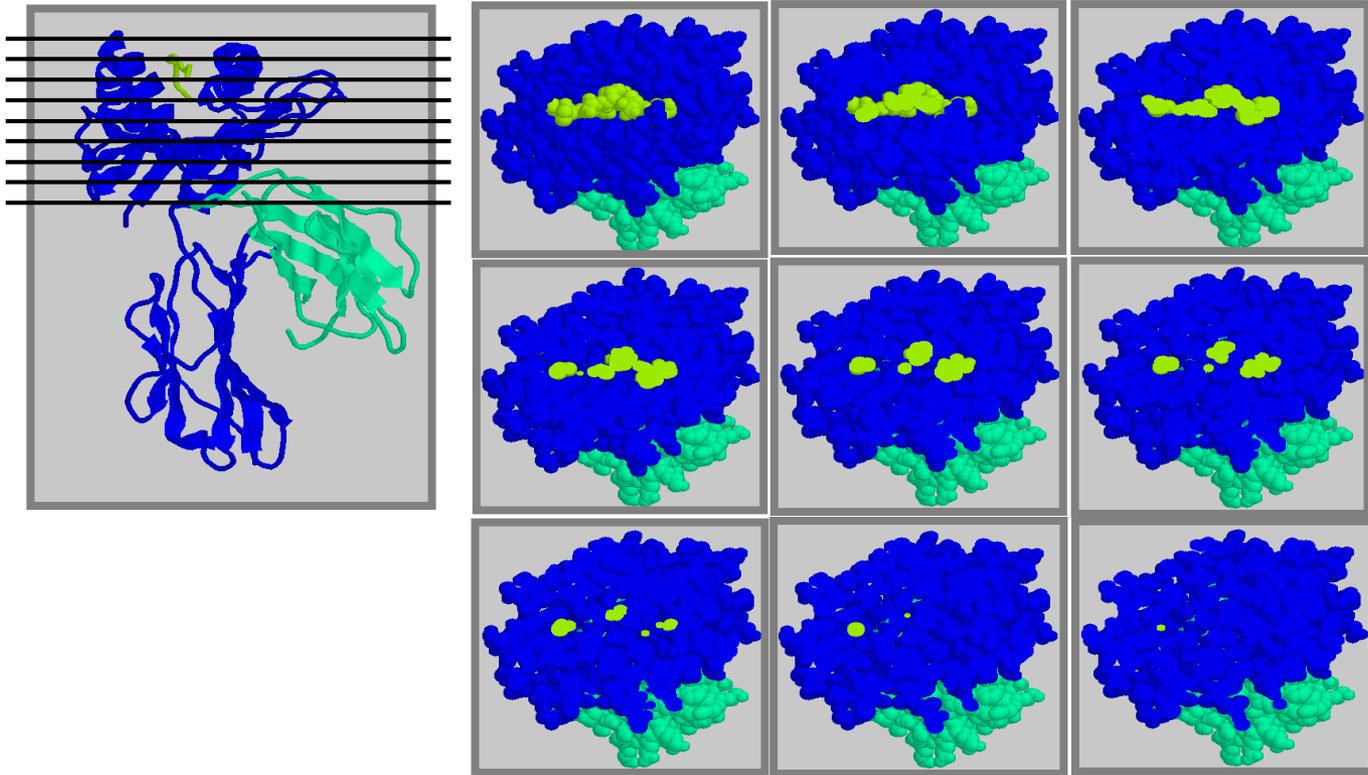

Interazioni  
AA-TCR

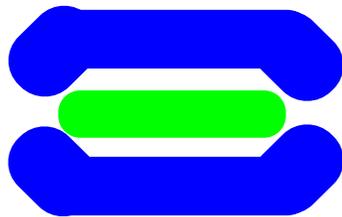

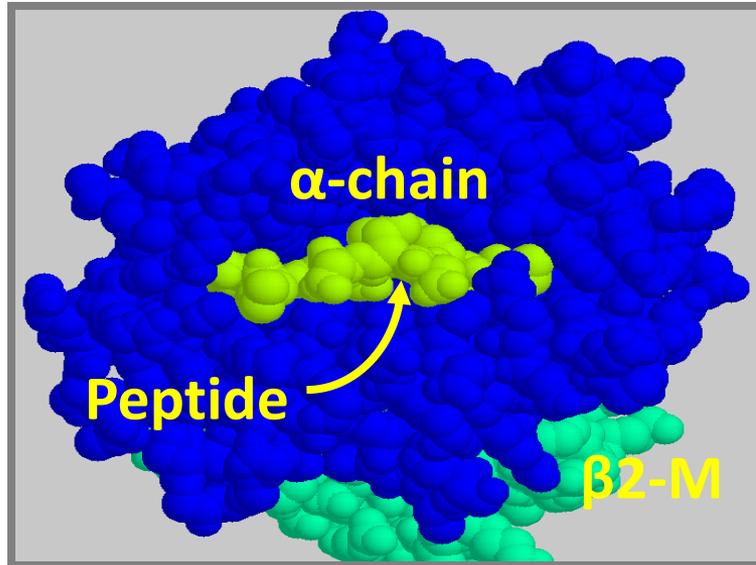

HLA-DR2 + MBP peptide

# Interazione fra peptide e tasca

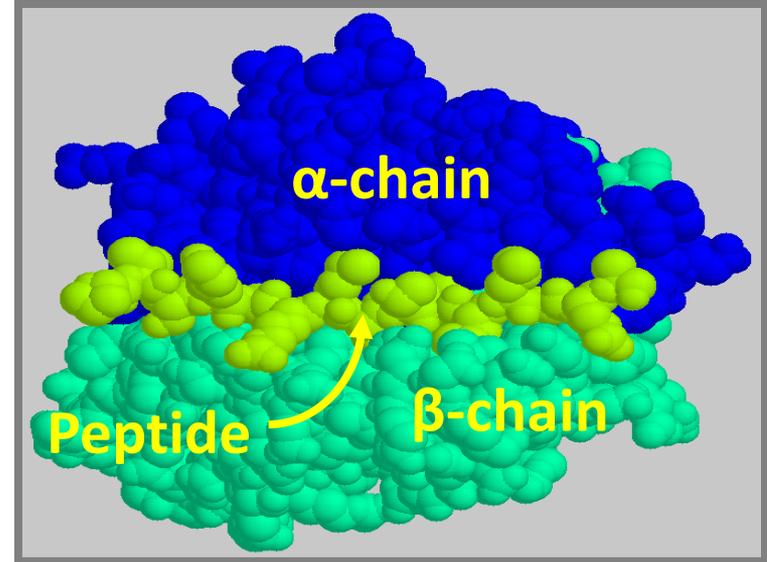

**Tagli orizzontali: tasche conservate accomodano le catene aminoacidiche del peptide**

# Interazione fra peptide e tasca

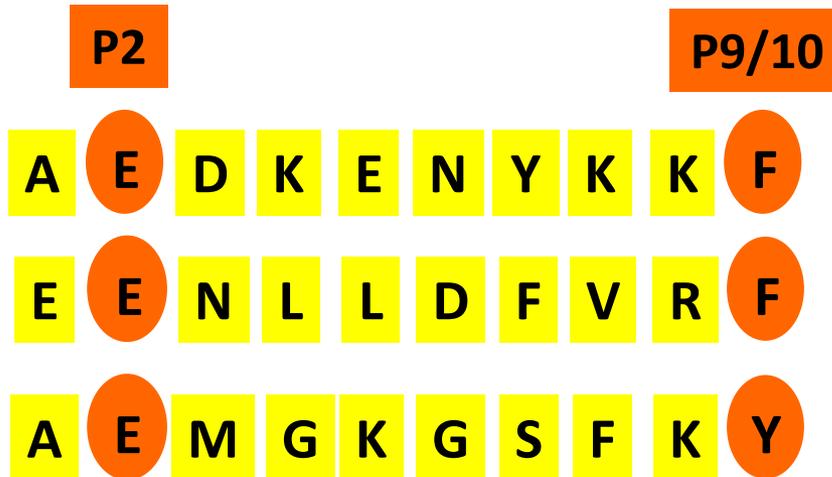

Classe I: 8-10 aa

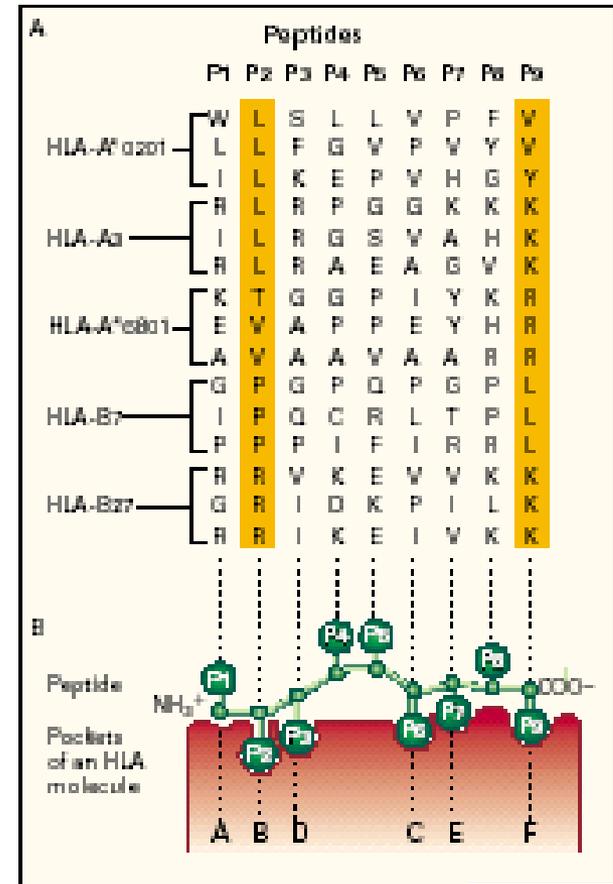

Classe II: >13 aa

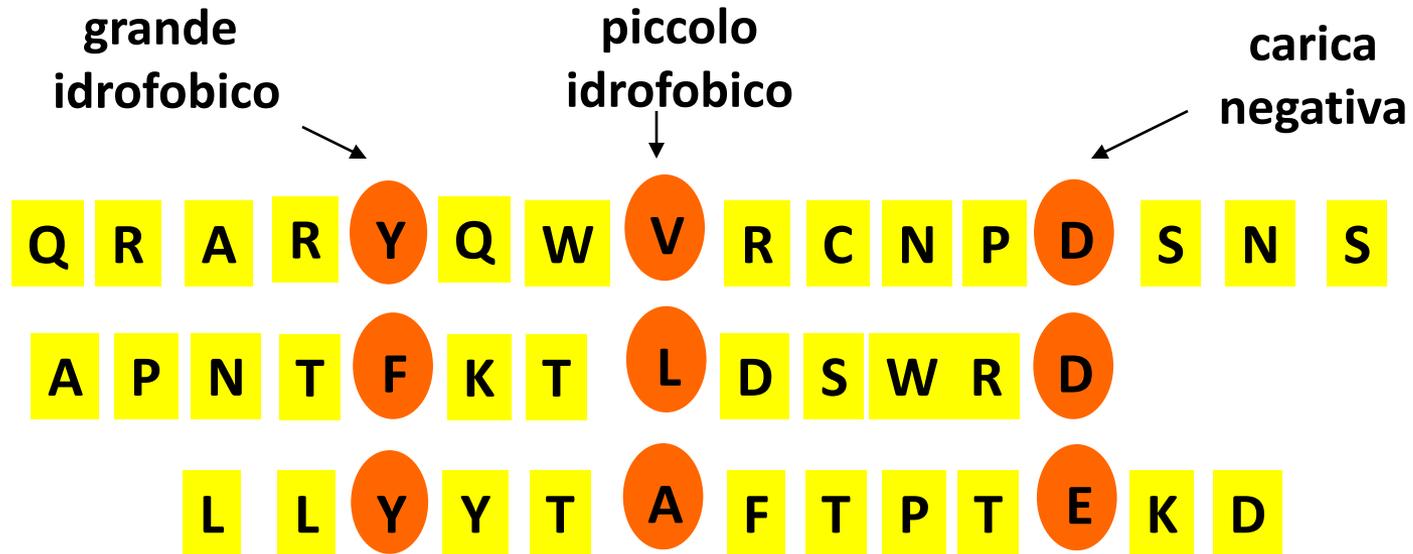

# II peptide binding motif: classe I

- Allele-specificità
- Ancore ben definite

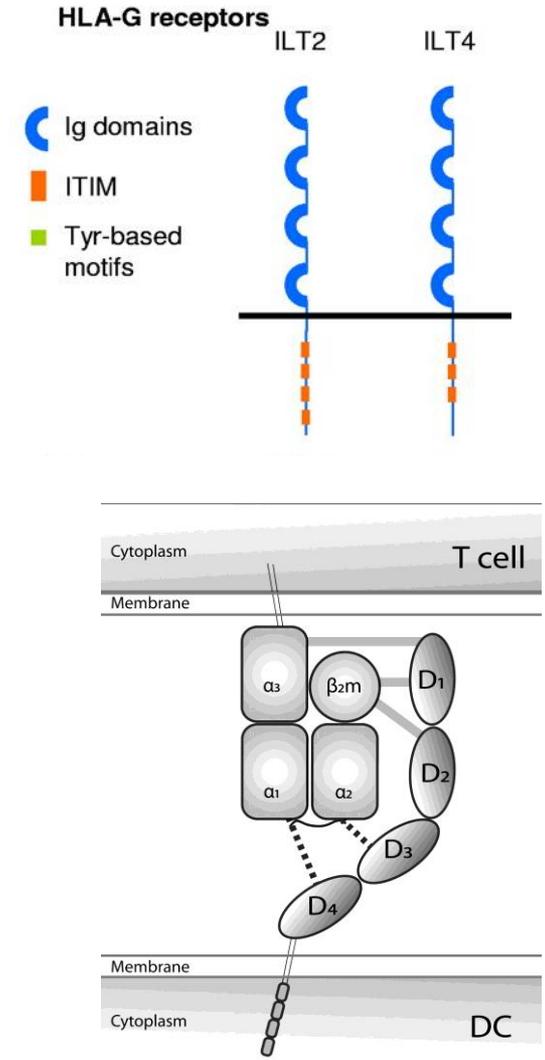

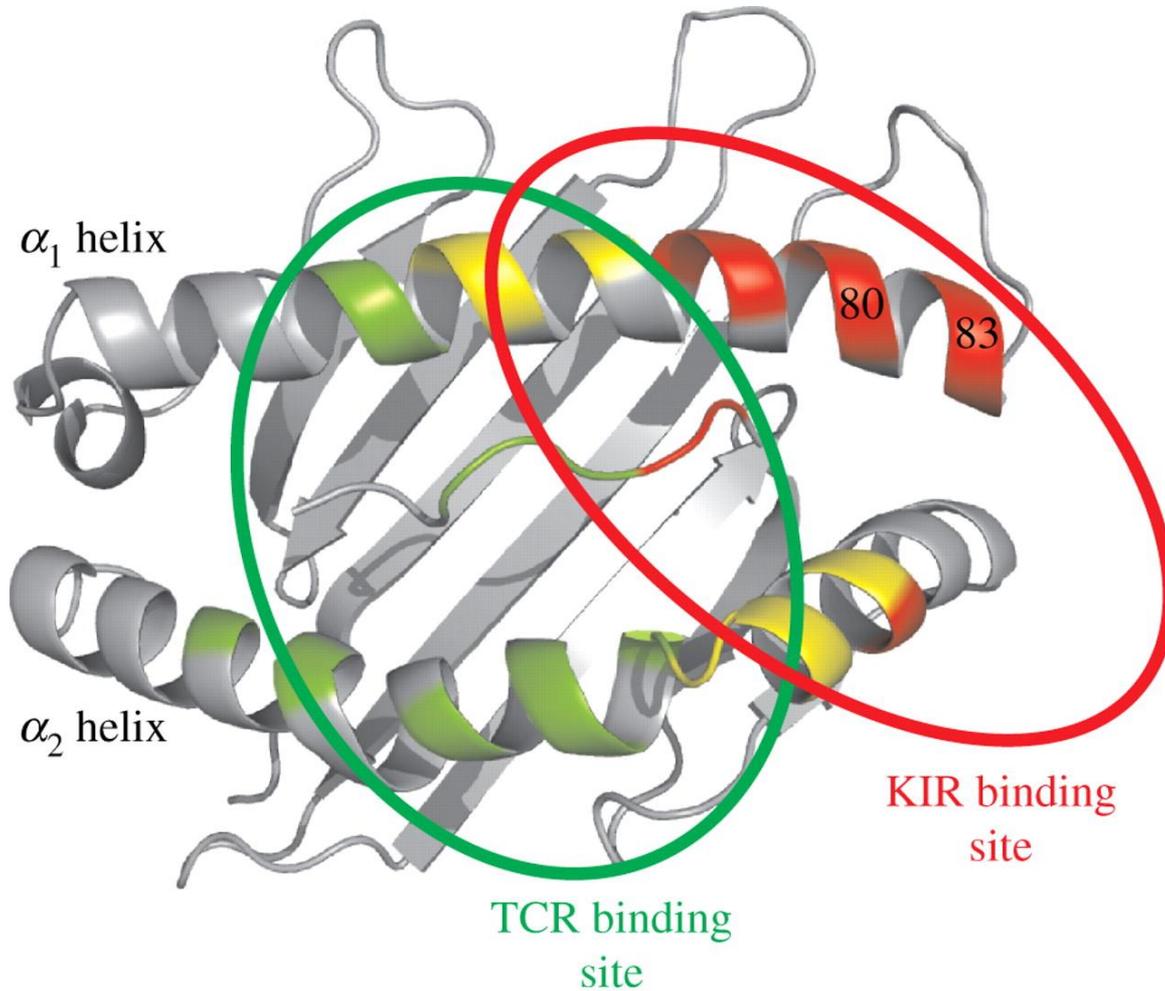

# Il peptide binding motif: classe II

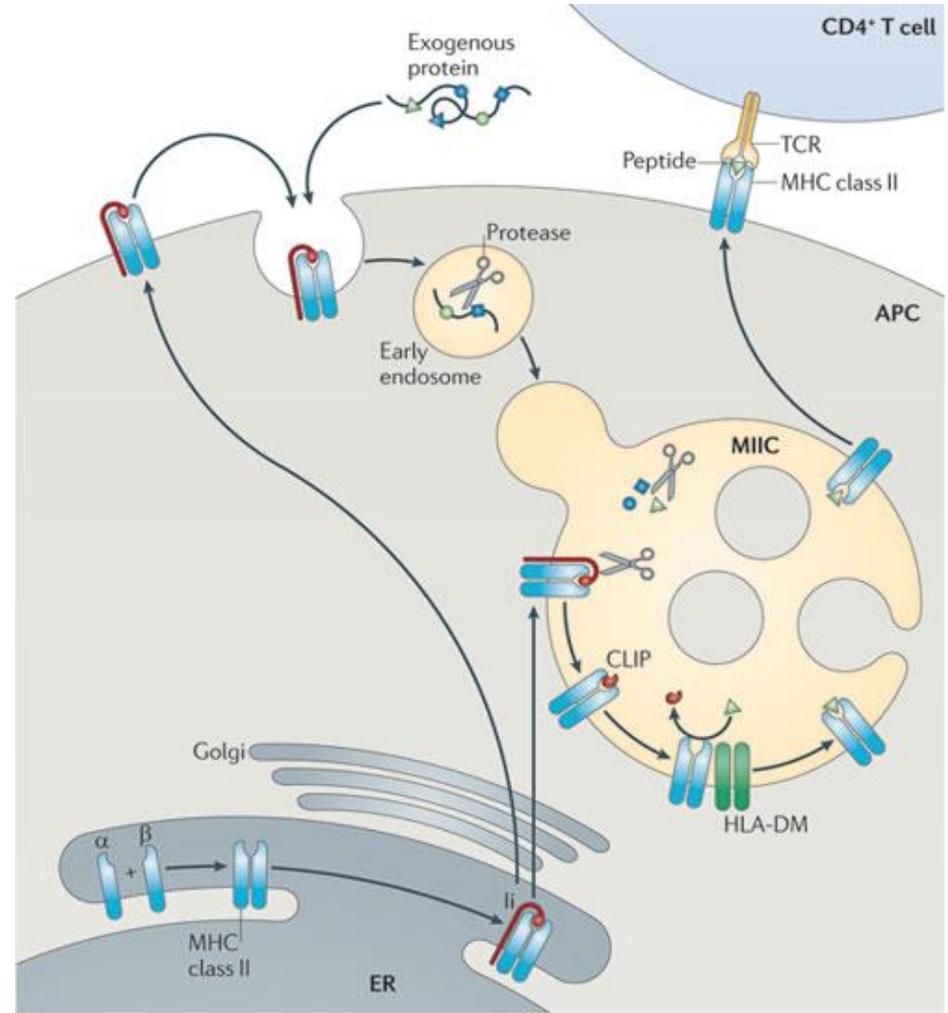

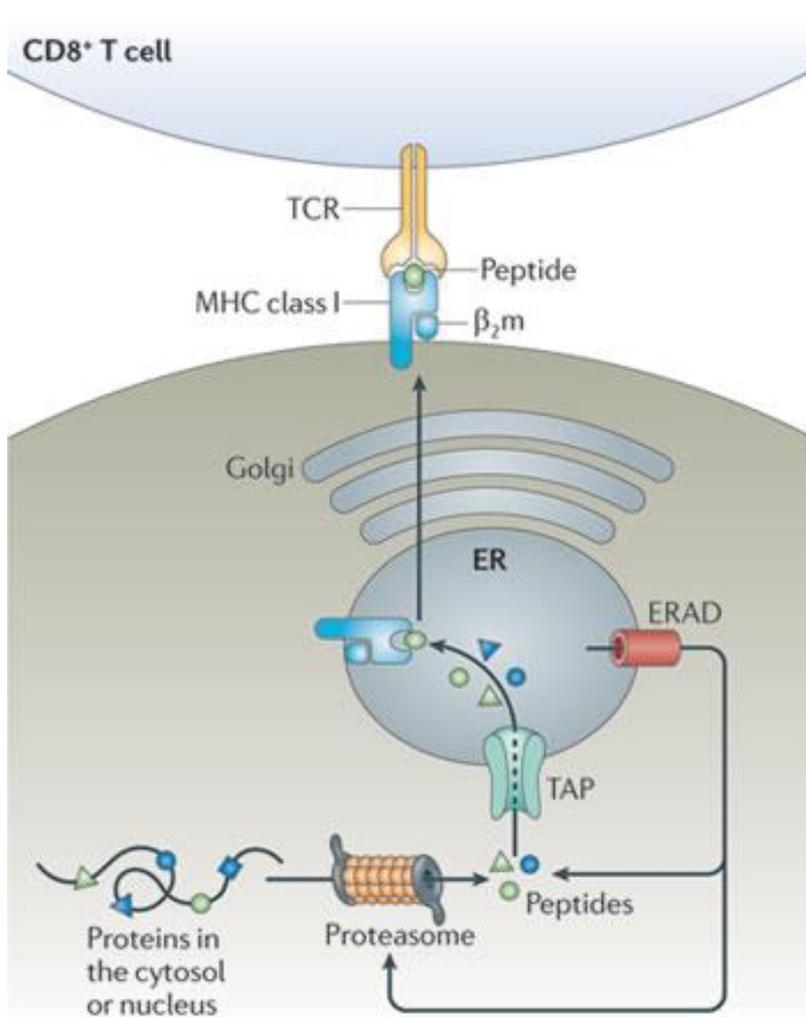

- Promiscuità

# Interazione tra HLA e Recettori

# Presentazione HLA Classe I e Classe II

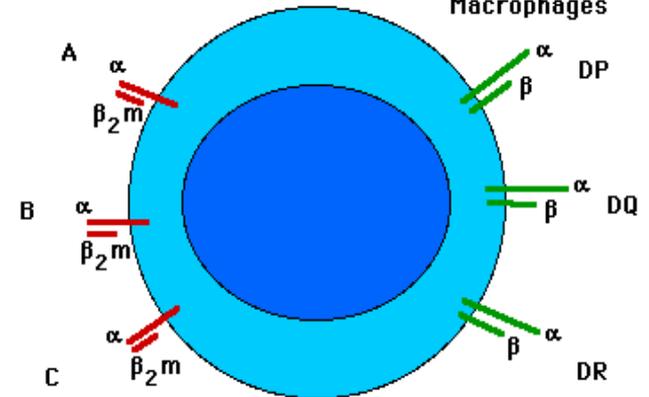

# Function of HLA Molecules

## HLA Class I (ubiquitous)

- Antigen Presentation to cytotoxic T cells (Adaptive Immunity)
- Immune control from Infection, Tumors
- Self-Nonself Discrimination (Alloreactivity)
- Inhibitor of Natural Killer Cell Cytotoxicity

MHC Class I:  
All nucleated cells

MHC Class II:  
B cells  
APC's  
Macrophages

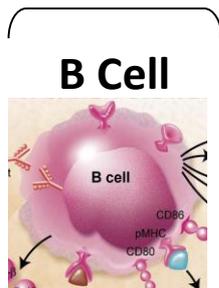

## HLA Class II (Immune-related cells)

- Antigen Presentation to helper T cells (Adaptive Immunity)
- Immune control from Infection, Tumors
- Self-Nonself Discrimination (Alloreactivity)

# Alloreactivity

## Reactivity to Non-Self (Allos=Other)

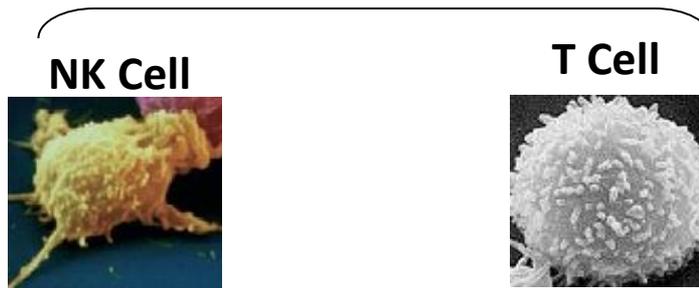

### Humoral

### Alloantibodies

- Solid Organ Transplantation
- HLA-incompatible SCT

### Cellular

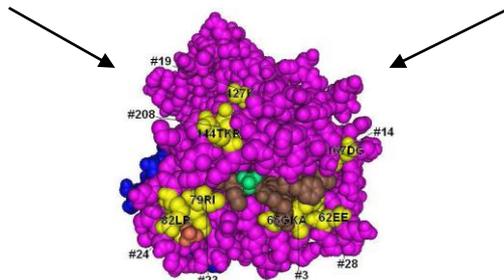

### Lysis; Cytokines

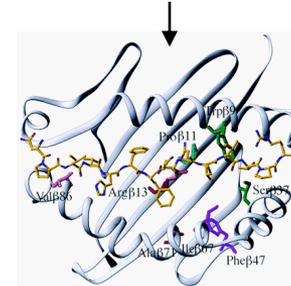

- HLA incompatible SCT
- Solid Organ Transplantation?

### Lysis; Cytokines

- Allogeneic SCT
- Solid Organ Transplantation

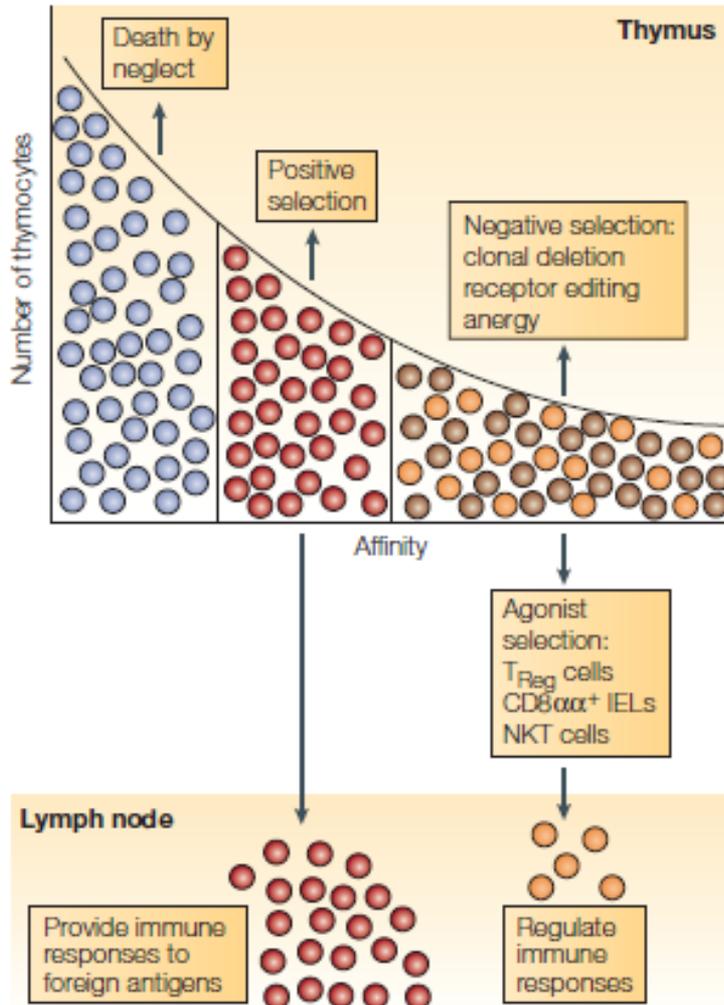

### Structural Epitopes (Eplets)

### Peptide-dependent T Cell Epitopes (TCE)

# T Cell Alloreactivity

## Central Tolerance – Clonal Deletion

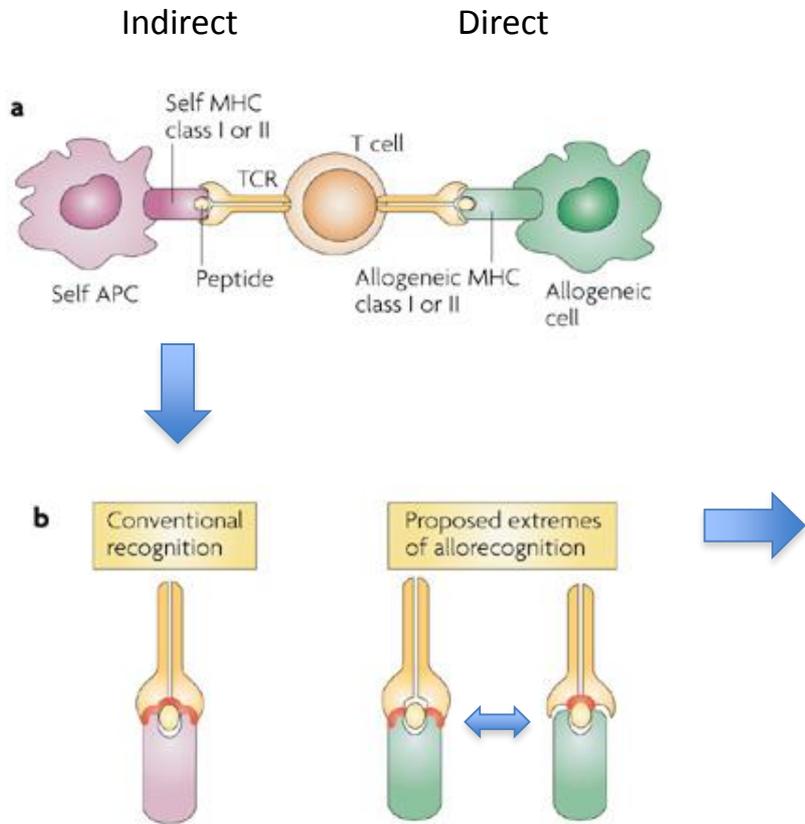

- Positive Selection for T cells with
  - low affinity for self-HLA
- Negative Selection against T cells with
  - no affinity for self-HLA
  - too high affinity for self-HLA

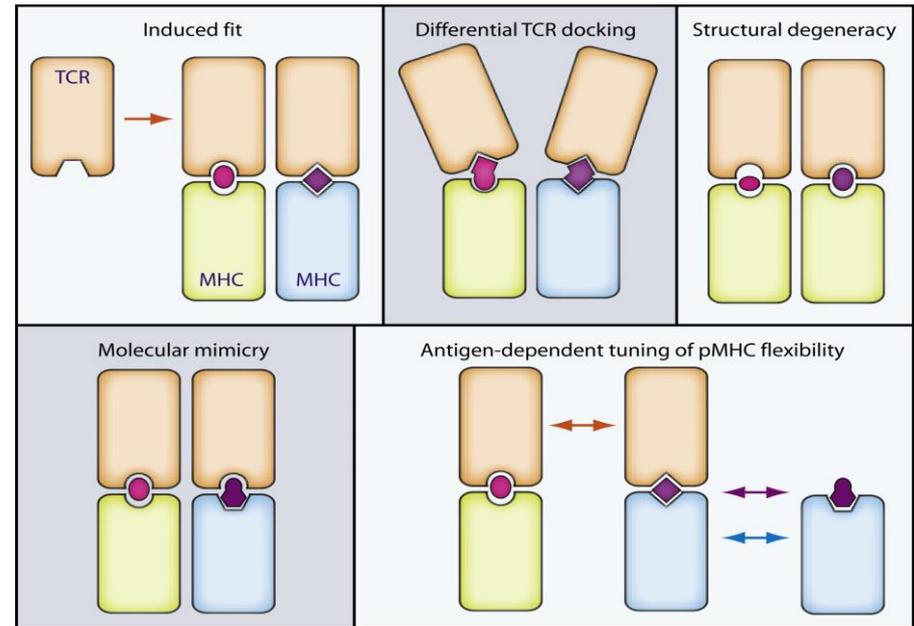

**Deletion of T cells  
reactive to dominant TCE!**

# Mechanism of T cell allorecognition

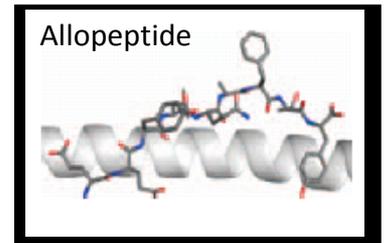

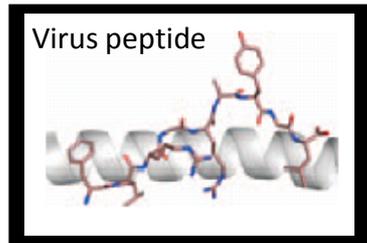

## 5 different models of cross-recognition

## Molecular mimicry

HLA-B8 (Self)

HLA-B44 (Allo)

# Unrelated HSCT Rejection

## Serologically HLA-identical MUD

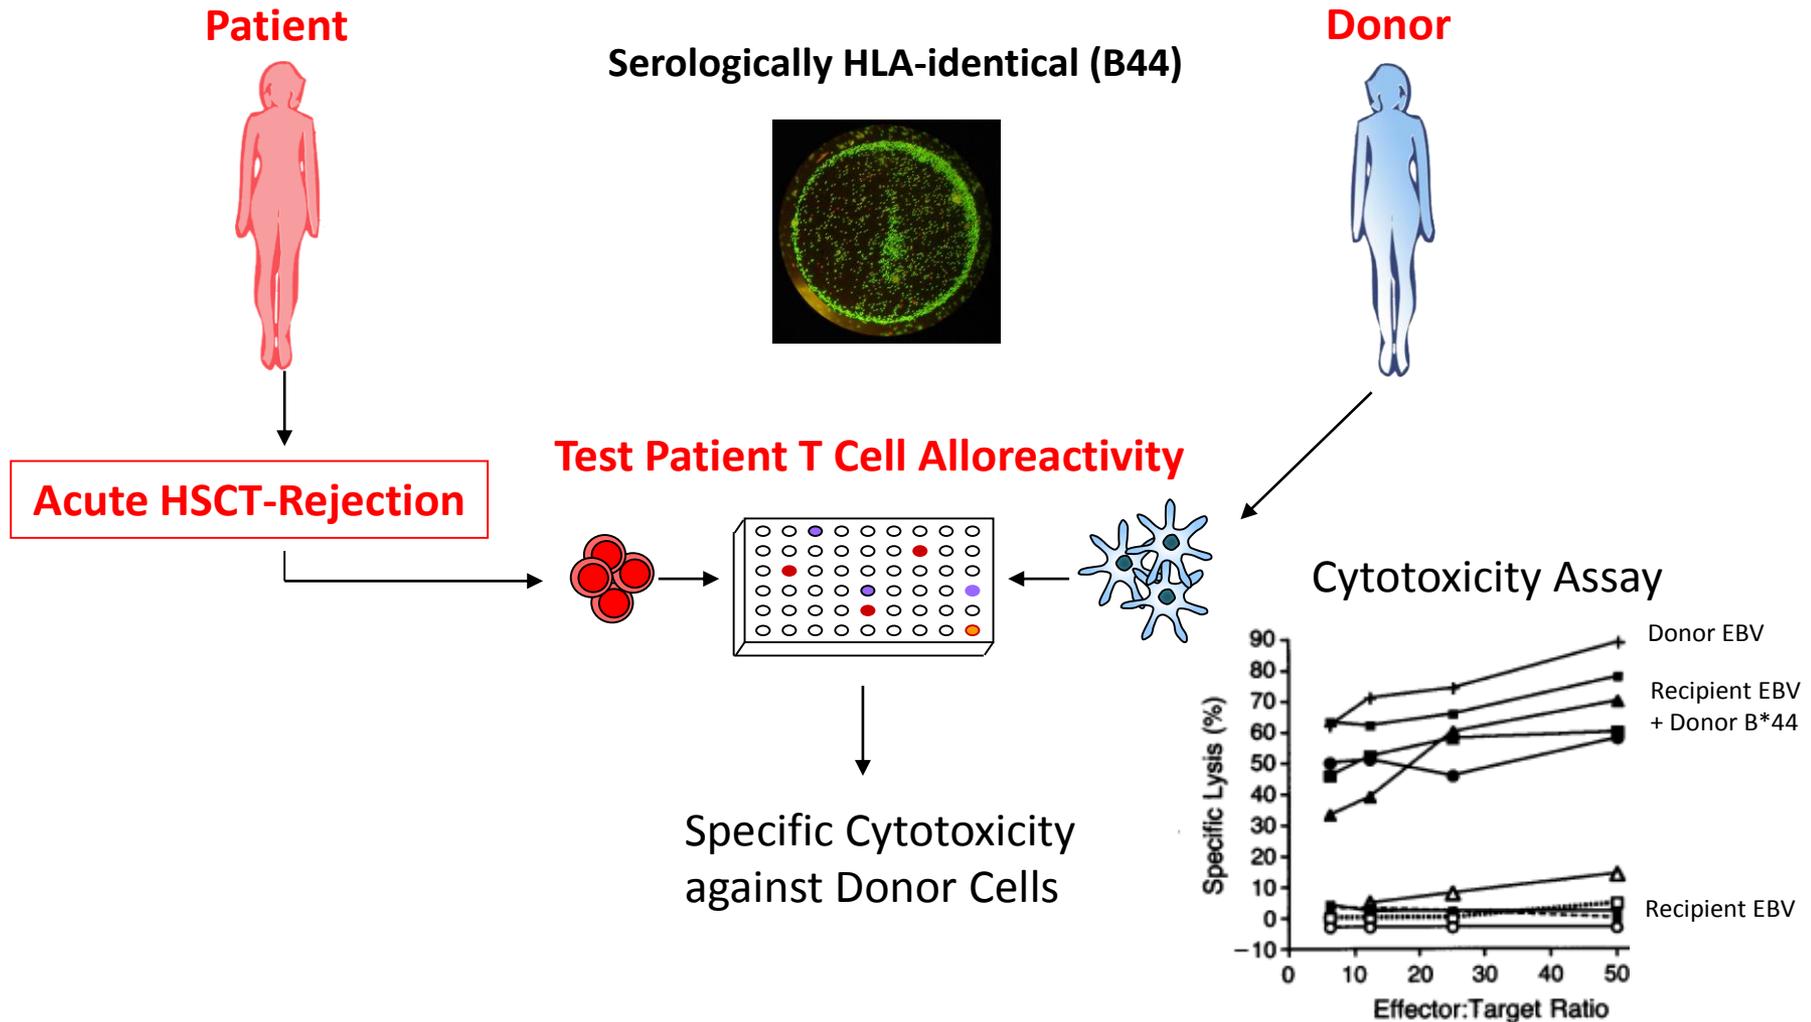

---

**BONE MARROW-ALLOGRAFT REJECTION  
BY T LYMPHOCYTES RECOGNIZING  
A SINGLE AMINO ACID DIFFERENCE IN  
HLA-B44**

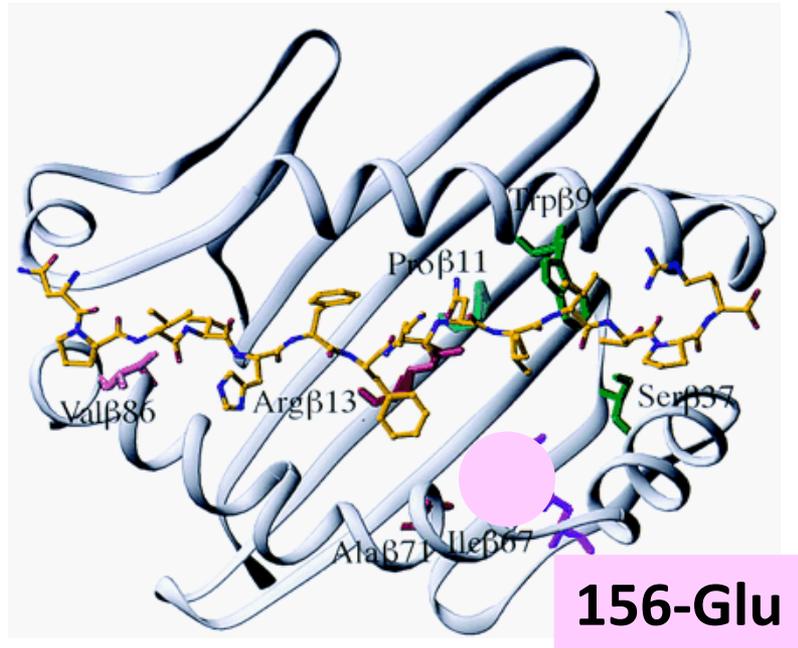

KATHARINA FLEISCHHAUER, M.D.,  
NANCY A. KERNAN, M.D.,  
RICHARD J. O'REILLY, M.D.,  
BO DUPONT, M.D., D.SC.,  
AND SOO YOUNG YANG, PH.D.

# Unrelated HSCT Rejection

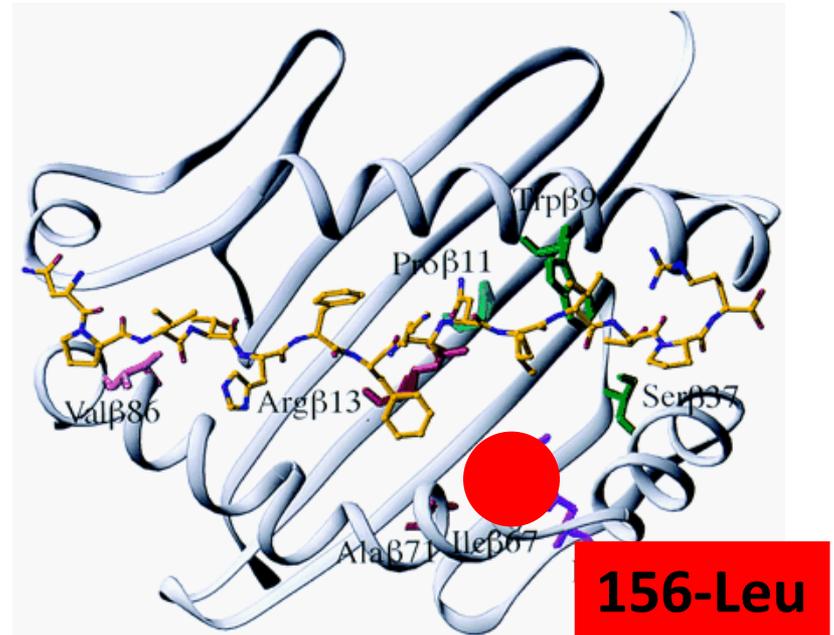

## Serologically HLA-identical MUD

# Alloreattività T può discriminare un singolo aa

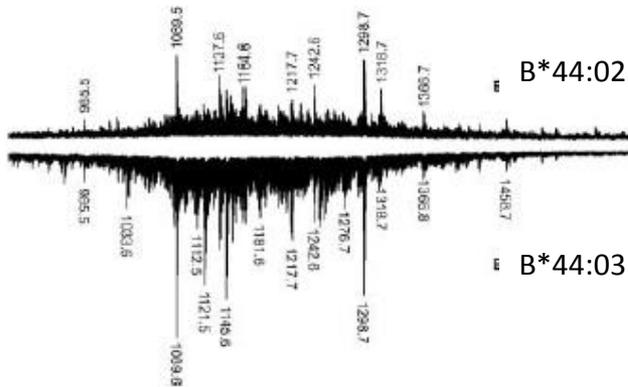

Paziente: HLA-B\*44:02

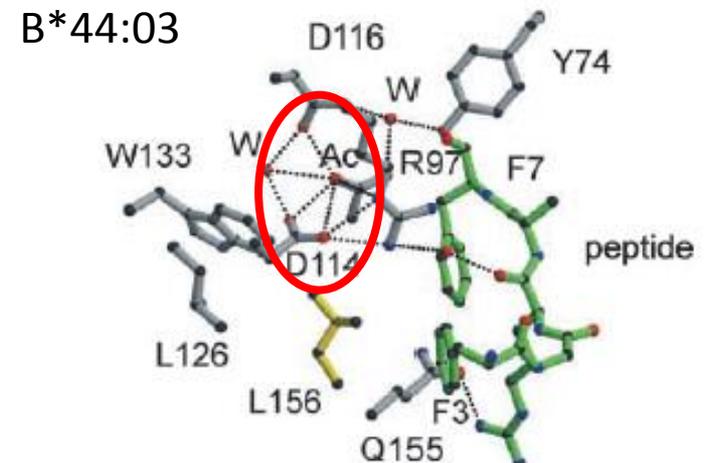

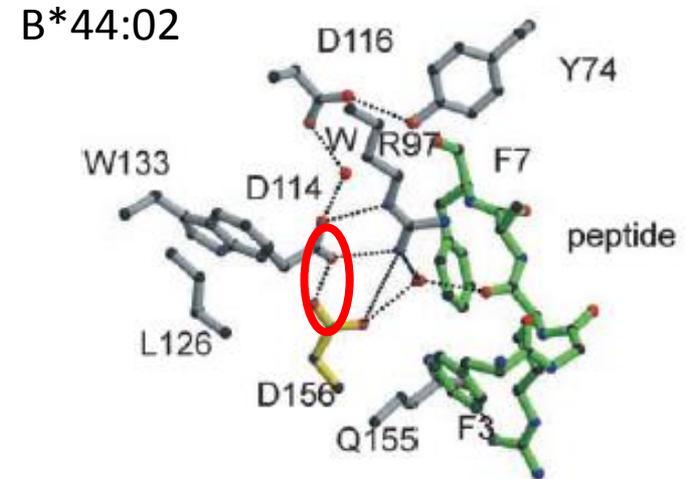

Donatore: HLA-B\*44:03

# HLA-B\*4402 vs B\*4403: Structural differences...

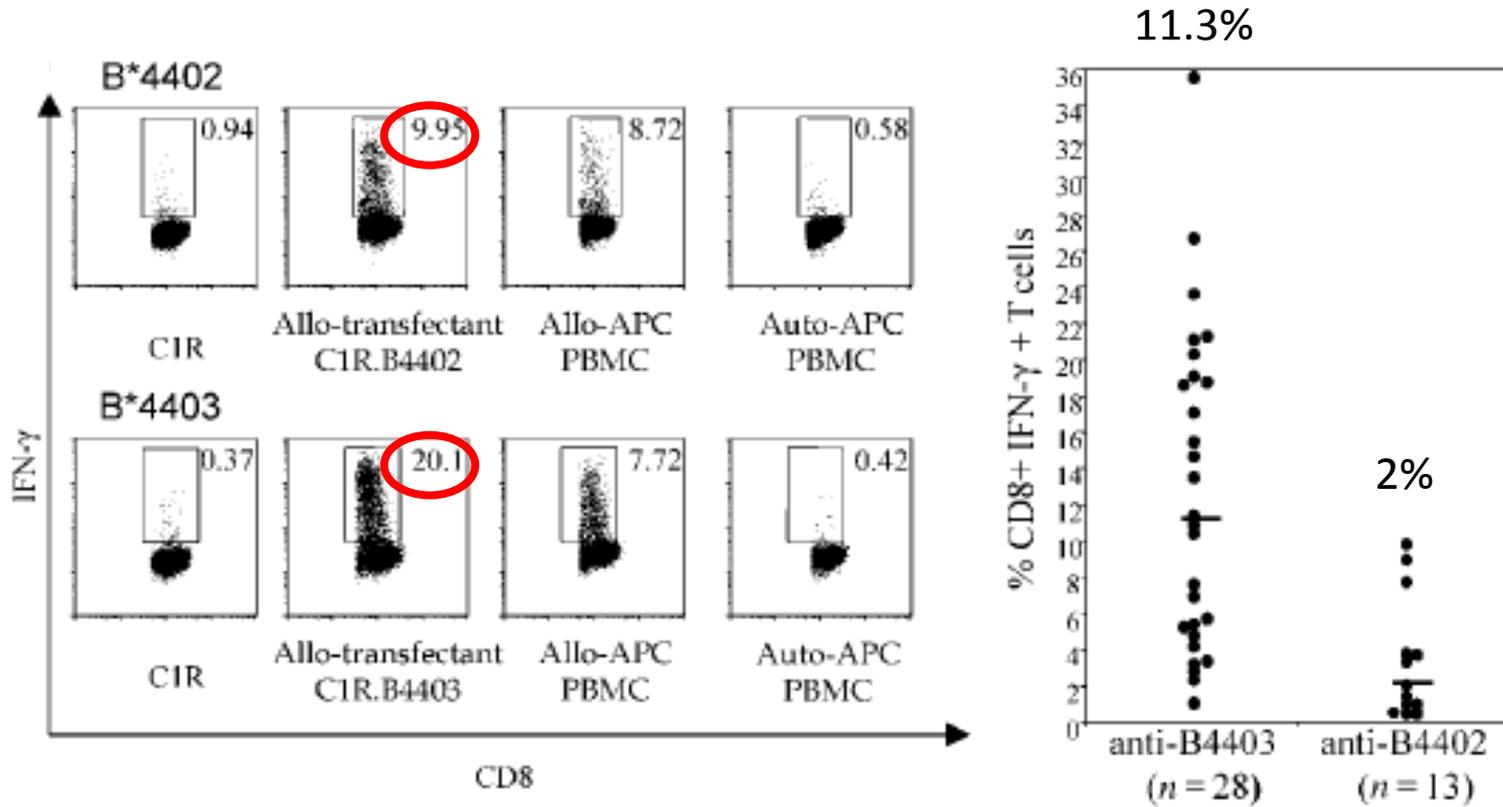

<b>HLA-B*4402</b>	<b>Position</b>	1	2	3	4	5	6	7	8	9
Anchor residue			E							Y
Preferred residue		E		D	P					F
				M						W
<b>HLA-B*4403</b>	<b>Position</b>	1	2	3	4	5	6	7	8	9
Anchor residue			E							Y
Preferred residue		E		D	P					F
				M		V				

- Similar peptide motifs and 5% unique peptides
- 80% of these were presented only by B\*4403 (higher promiscuity)

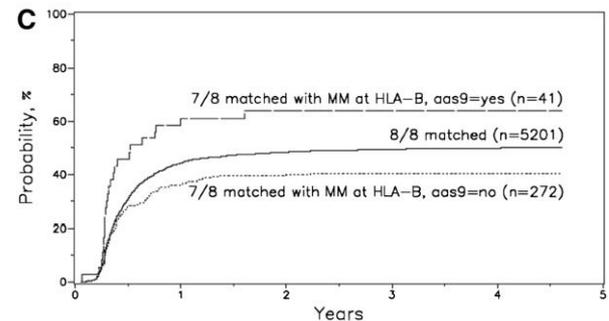

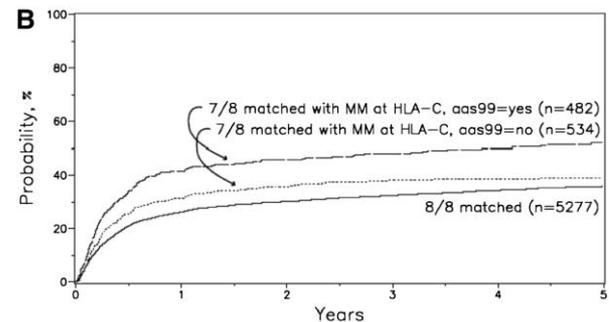

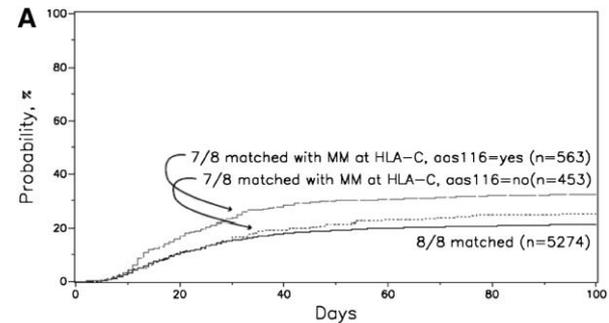

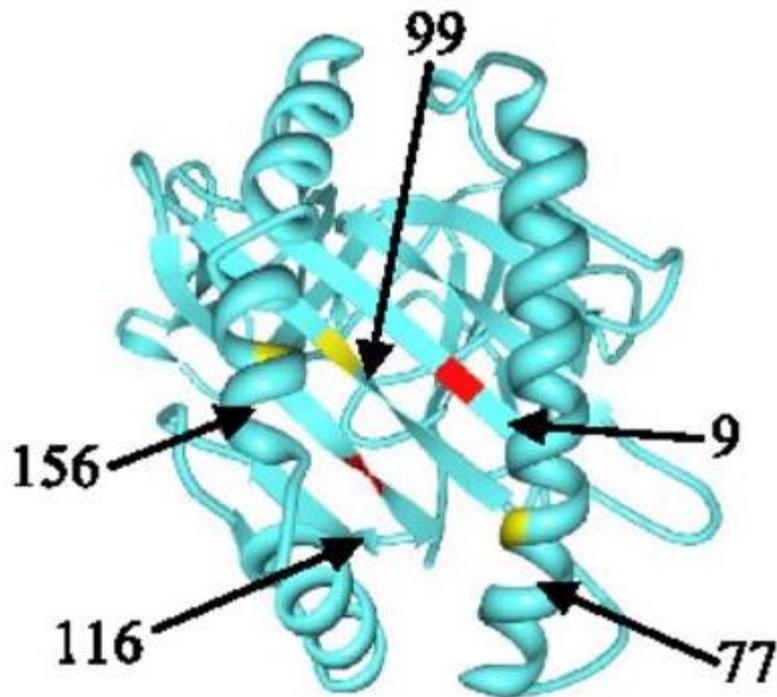

# ...and functional implications

- Stronger Immunogenicity of HLA-B\*44:03 vs B\*44:02

# HLA-C: Mismatches nella PBG e incidenza di GvHD

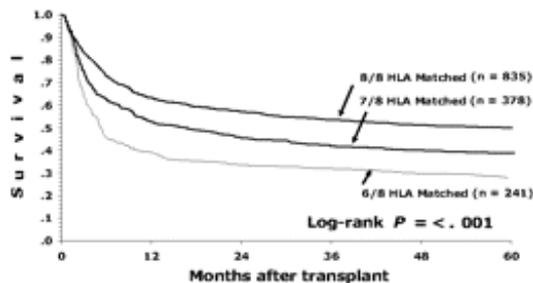

# Structural Matching

## 8/8 Allelic Identity Improves Survival after VUD-HSCT

- 3857 VUD Tx from unrelated adult volunteer donors (*Lee, Blood 2007*)

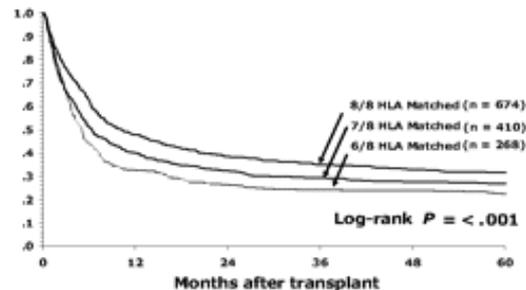

Early Stage

$P < 0.001$

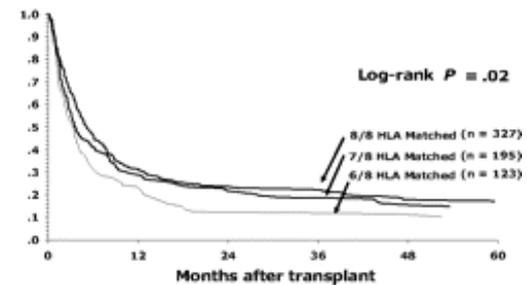

Intermediate Stage

$P < 0.001$

Late Stage

$P = 0.02$

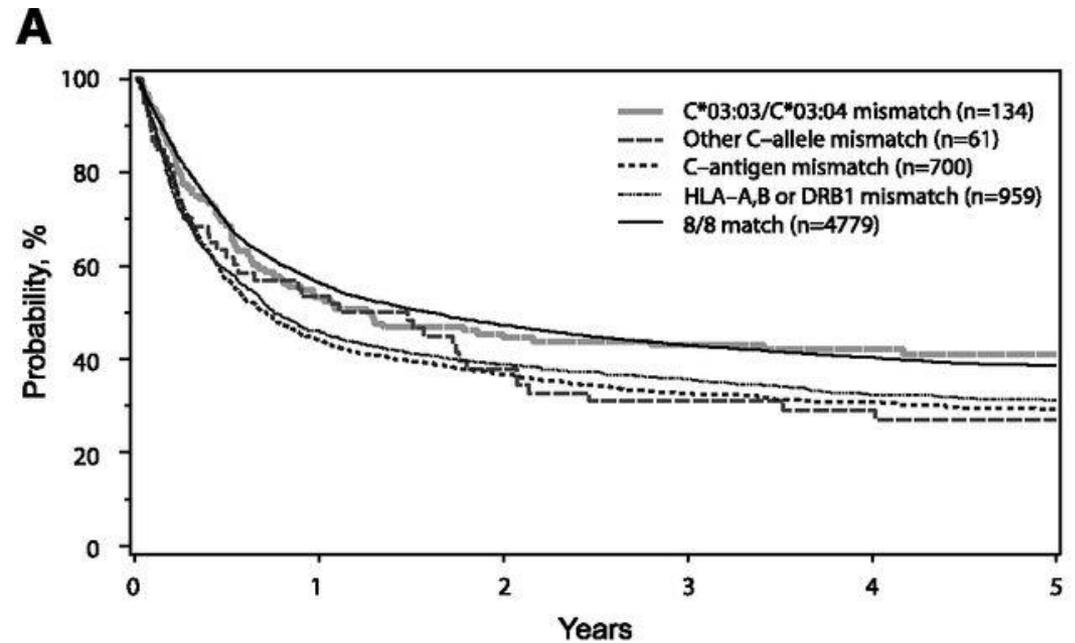

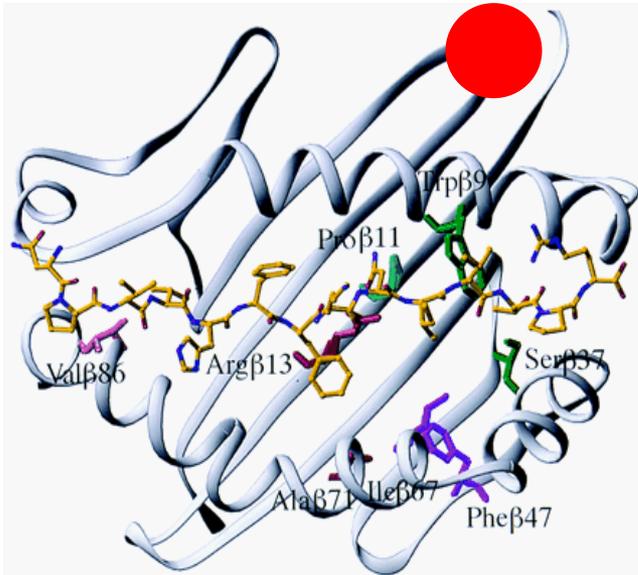

**MAINLY IN PATIENTS WITH EARLY DISEASE**

# E' sempre vero?

Line	Allele	Population	% of individuals that have the allele	Allele Frequency (in_decimals)	Sample Size	IMGT/HLA <sup>1</sup> Database	Distribution <sup>2</sup>	Haplotype <sup>3</sup> Association	Notes <sup>a</sup>

# Take Home Messages

---

- Ora che le tecnologie di tipizzazione ci permettono di ottenere un elevatissimo dettaglio nella tipizzazione HLA, diviene essenziale caratterizzare funzionalmente quali differenze strutturali/incompatibilità siano funzionalmente rilevanti
- E' ancora largamente da esplorare l'impatto dei livelli di espressione dei singoli alleli HLA sui fenomeni di alloreattività
